ISO 50046:2019 (E)

General methods for predicting energy savings

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Objectives, context and principles of calculation of PrES

- 4.1 Clarifying the objectives
- 4.2 Analysing the context
- 4.3 Principles
- 4.3.1 General
- 4.3.2 Initial planning
- 4.3.3 Appropriate level of accuracy
- 4.3.4 Transparency and reproducibility
- 4.3.5 Reliability and validation

5 Preparation and selection of the calculation method

- 5.1 General
- 5.2 Identification of the stakeholders
- 5.3 Description of an EPIA
- 5.3.1 General
- 5.3.2 General types of EPIA
- 5.3.3 Boundaries of the EPIA and PrES
- 5.3.4 Key questions about the planned implementation of EPIAs
- 5.4 Calculation objectives and required accuracy
- 5.5 Data availability and quality
- 5.6 Selection of the calculation method
- 5.6.1 General types and choice of the calculation method
- 5.6.2 Type of data analysis
- 5.6.3 Data collection techniques and sources
- 5.6.4 Type of calculation formula or model
- 5.6.4.1 General formula
- 5.6.4.2 Type I calculation
- 5.6.4.3 Type II calculation
- 5.7 Validation

6 Calculation process for an EPIA

- 6.1 General
- 6.2 Overall calculation process
- 6.3 Determination of the EnB
- 6.3.1 General
- 6.3.2 Types of EnB
- 6.3.3 Baseline period
- 6.3.4 Determination and validation of the EnB
- 6.4 Determination of predicted energy consumption
- 6.5 Calculation of the PrES
- 6.5.1 Specifying the calculation assumptions
- 6.5.2 Calculation
- 6.5.3 Documentation and validation
- 6.6 PrES over the prediction period

7 Aggregation of the PrES

7.1 General
7.2 Ensuring the consistency in aggregating PrES
7.3 Aggregation of PrES
7.4 Assessing the causality between an action plan, programme or policy and the EPIAs
7.5 Documentation and validation

8 Quality and uncertainty

8.1 General considerations
8.2 Quality criteria for the EPIAs and their implementation
8.3 Quality criteria for calculation methods
8.4 Analysing the quality and/or assessing uncertainty of PrES

Annex A (informative) Overview of the main criteria to take into account when using this document

Annex B (informative) Overview of the main issues subject to validation and/or documentation

Annex C (informative) Example templates for documenting a calculation method and PrES

Annex D (informative) Case example in the residential sector using reference data

Annex E (informative) Case example in the industrial sector using context-specific data

E.1 General
E.2 Total PrES of EPIA1
E.3 PrES of EPIA2
E.3.1 Cooling system
E.3.2 EPIA2
E.3.3 Outline estimate
E.3.4 Detailed estimate
E.4 Result

Annex F (informative) More information about lifetime of EPIAs, retention rate and persistence rate

F.1 Lifetime of the EPIAs
F.2 Retention rate
F.3 Persistence rate
