

ISO 24443:2012-06 (E)

Determination of sunscreen UVA photoprotection in vitro

Contents		Page
Foreword		iv
1	Scope	1
2	Terms and definitions	1
3	Principle	2
4	Apparatus	2
4.1	UV spectrophotometer specifications	2
4.2	Calibration of the UV spectrophotometer	3
4.3	Calibration of the UV exposure source	3
4.4	Monitoring of the UV exposure source	3
4.5	Calibration of the UVA radiometer used to monitor the test sample irradiation	4
4.6	Substrate/plate	4
5	Test method	4
5.1	Outline of the test procedure	4
5.2	Equipment calibration and validation of test plates	4
5.3	Absorption measurements through the plate	5
5.4	Sample application	5
5.5	Absorbance measurements of the product-treated plate	5
5.6	Number of determinations	5
5.7	Determination of initial calculated SPF (SPF _{in vitro}), "C" value, initial UVAPF (UVAPF ₀), and UV exposure dose	5
5.8	UV exposure	7
5.9	Measurement of final adjusted absorbance spectrum	7
5.10	Calculation of UVAPF of plates after UV exposure of the sample	8
6	Procedure using the spreadsheet in this International Standard	8
7	Reference sunscreen formula S2	9
8	Test report	9
Annex A (normative) Calibration of UV spectrophotometer and plate transmission test		10
Annex B (normative) Radiometer calibration to spectroradiometric irradiance procedure		14
Annex C (normative) Computation values: PPD and erythema action spectra and UVA and UV-SSR spectral irradiances		16
Annex D (normative) PMMA test plates surface specifications		19
Annex E (normative) UVA reference sunscreen S2		21
Annex F (informative) Statistical calculations		25
Bibliography		27
