

DIN SPEC 10133:2014-09 (E)

Toxicological assessment of additives for tobacco products - A guidance

Contents		Page
Foreword		3
1	Background and objective of this document	4
2	Overview of current legal requirements, agreements and proposals	5
3	Discussion of approaches to the toxicological examination and evaluation of additives to tobacco products	9
3.1	Purpose	9
3.2	Basic considerations	9
3.2.1	General	9
3.2.2	Test matrix	10
3.2.3	Smoke generation	11
3.2.4	Substrates	11
3.2.5	Reference parameters for test doses	13
3.2.6	Scope of testing	13
3.2.7	In vivo versus in vitro testing	14
3.2.8	Positive controls	14
3.2.9	Discriminatory power of test systems	14
3.3	Toxicological data for the unburnt additive	15
3.4	Toxicological testing of the additive after combustion	15
3.4.1	Chemical analytical processes	15
3.4.2	Biological test systems	17
3.5	Interpretation and evaluation of toxicological data	24
4	Conclusions and recommendations	25
4.1	General	25
4.2	Toxicological data for the additive as a neat single substance	25
4.3	Pyrolysis of the additive as a neat single substance	25
4.4	Chemical and toxicological effects of additives on cigarette mainstream smoke	25
4.5	Assessment of test results	27
Annex A (informative)	Examples of databases supplying authorized and peer-reviewed toxicological data	31
