ISO 17175:2017-11 (E)

Bidis - Determination of total and nicotine-free dry particulate matter using a linear routine analytical smoking machine

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principle 4

5 Apparatus 4

6 Preparation of bidi test portion for smoking 5
6.1 Conditioning of bidi laboratory sample 5
6.2 Selection of conditioned bidis 5
6.2.1 General 5
6.2.2 Selection by mass 5
6.2.3 Selection by length of mass selected bidis (6.2.1) 5
6.3 Marking the butt length and insertion depth 6
6.3.1 Standard butt length and insertion depth 6
6.3.2 Marking of butt length and insertion depth 6
6.4 Conditioning and test atmosphere 6
6.4.1 Conditioning of bidis 6
6.4.2 Testing atmosphere 6
6.5 Smoking and collection of particulate matter 6
6.5.1 Smoking plan 6
6.5.2 Preparation of smoke traps 7
6.5.3 Puffing parameters 7
6.5.4 Setting up the smoking machine 7
6.5.5 Procedure for smoke run 7
6.6 Determination of total particulate matter 8
6.7 Calculation of total particulate matter 8
6.8 Treatment of total particulate matter 8
6.8.1 Extraction procedure 8
6.8.2 Determination of water 9
6.8.3 Determination of nicotine 9
6.8.4 Calculation of NFDPM 9

7 Test report 9

8 Repeatability and reproducibility 11

Annex A (informative) Example of a bidi holder for a linear smoking machine 12

Annex B (informative) Interlaboratory test data 14
