European foreword 4

Foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Scheme design and purpose 8
4.1 General 8
4.2 Scheme objectives 8
4.3 Laboratory requirements for schemes 9
4.4 Choice of test matrices 9
4.5 Information on test methods used by the PT provider 9
4.6 Statistical design 9

5 Technical requirements and guidance for sample design and content 10
5.1 Sources, characterization and traceability of organisms 10
5.2 Target organisms level 10
5.3 Non-target organisms and interferences 11
5.4 Matrix selection and effects 11

6 Sample verification by the provider 12
6.1 General 12
6.2 Sample homogeneity testing -- General considerations 12
6.3 Homogeneity testing for quantitative (enumeration) samples 12
6.4 Homogeneity testing for qualitative methods 13
6.5 Stability testing by the provider 14
6.5.1 General 14
6.5.2 Stability during storage conditions 14
6.5.3 Stability during transport conditions 14

7 Sample handling 15
7.1 General 15
7.2 Instructions to participants 15

8 Performance evaluations 15
8.1 General 15
8.2 Preliminary considerations 15
8.3 Assessment of quantitative methods 16
8.3.1 General 16
8.3.2 Distribution of data 17
8.3.3 Determining the assigned value 18
8.3.4 Uncertainty of the assigned value 18
8.3.5 Methods of assessing performance 18
8.3.6 Using z-scores 18
8.3.7 Other methods of performance evaluation 20

8.3.8 Long-term performance assessment 22
8.4 Assessment of qualitative methods 23
8.4.1 General 23
8.4.2 Performance of individual laboratories 23
8.4.3 Scheme comparisons of laboratory performance 25

Annex A (informative) Example of details to be included in a PT scheme plan 27

Annex B (informative) Preparation of fungal spore suspensions 29

B.1 General 29
B.2 Procedure 29
B.2.1 General 29
B.2.2 Preparing spore suspensions from agar plates 29
B.2.3 Preparing spore suspensions from agar slopes 29
B.2.4 Storage 29
B.2.5 Quality control checks 29

Annex C (informative) Methods of testing for variation between portions of test materials 30

C.1 T1 - T2 test 30
C.2 Test for sufficient homogeneity 31

Annex D (informative) Example of a safety data sheet 34

Annex E (informative) A practical method to assess long-term performance of participants in PT schemes using enumeration methods 36

E.1 Preparing data for analysis 36
E.2 Dealing with censored data 36
E.3 Plotting results 37
E.4 Allocation of scores 37

Bibliography 38

Figures Figure 1 -- Diagram of a normal distribution 17

Figure 2 -- Number of positive isolations per laboratory code for all tested low-level materials (n = 6) 25

Tables Table 1 -- Limits of acceptability 21

Table 2 -- Observed and expected numbers of sets of results assuming random distribution of low results (from a distribution of low levels of Clostridium perfringens in drinking water samples, where variation in numbers between test items may necessarily exceed laboratory performance variation) 23

Table 3 -- Chance of finding a certain number of positives out of six samples tested as a function of the average percentage of positive samples (binomial distribution) 24

Table A.1 -- PT scheme plan -- Summary of scheme 27
