

ISO/TS 22176:2020-01 (E)

Cosmetics - Analytical methods - Development of a global approach for validation of quantitative analytical methods

| Contents | Page |
|---|----------|
| Foreword..... | v |
| Introduction..... | vi |
| 1 Scope..... | 1 |
| 2 Normative references..... | 1 |
| 3 Terms, definitions and symbols..... | 1 |
| 3.1 Terms and definitions..... | 1 |
| 3.2 Symbols..... | 5 |
| 4 General principles..... | 6 |
| 4.1 Reminder..... | 6 |
| 4.2 Various conditions for the estimation of precision..... | 6 |
| 4.3 Accuracy profile..... | 7 |
| 5 Procedure..... | 9 |
| 5.1 Definition of the measured quantity..... | 9 |
| 5.2 Definition of objectives..... | 9 |
| 5.2.1 Choice of the scope of validation..... | 9 |
| 5.2.2 Choice of acceptance limits..... | 9 |
| 5.3 Selection of validation samples..... | 10 |
| 5.3.1 Choice of the type of matrix or types of matrices..... | 10 |
| 5.3.2 Methods for establishing reference values..... | 10 |
| 5.4 Characterization plan for validation..... | 10 |
| 5.4.1 Organization..... | 10 |
| 5.4.2 Choice of the number of series, repetitions and concentrations for the characterization plan for validation..... | 11 |
| 5.5 Calibration plan for the indirect methods..... | 11 |
| 5.5.1 Organization..... | 11 |
| 5.5.2 Choice of the number of series, repetitions and concentrations for the calibration plan..... | 12 |
| 5.6 Testing..... | 13 |
| 5.7 Calculation of predicted inverse concentrations for indirect methods..... | 14 |
| 5.7.1 General..... | 14 |
| 5.7.2 Calculation of the calibration models..... | 14 |
| 5.7.3 Calculation of back-calculated concentrations by inverse prediction..... | 15 |
| 5.8 Calculation of the validation criteria by concentration level..... | 15 |
| 5.8.1 General..... | 15 |
| 5.8.2 Trueness criteria by series..... | 15 |
| 5.8.3 Trueness and precision criteria by concentration..... | 16 |
| 5.8.4 Calculation of the tolerance intervals..... | 17 |
| 5.9 Construction of the accuracy profile..... | 18 |
| 5.10 Interpretation of the accuracy profile for validation..... | 19 |
| 5.10.1 General..... | 19 |
| 5.10.2 Decision rules..... | 20 |
| 5.10.3 Definition of the scope of validity..... | 21 |
| 5.10.4 Choice of a calibration procedure for the routine..... | 21 |
| 5.10.5 Influence and significance of the β proportion..... | 21 |
| 5.10.6 Identification of outliers..... | 22 |

| | | |
|------------------------------|--|-----------|
| 6 | Management of the outcomes during routine use | 22 |
| Annex A (normative) | Calculation of repeatability, intermediate precision and reproducibility standard deviations | 23 |
| Annex B (normative) | Contents of the validation file | 25 |
| Annex C (informative) | Setting-up an assay for determining the accuracy profile in the case of NDELA in cosmetic samples | 27 |
| Annex D (informative) | Influence of the value of β on the tolerance interval ($R = 3$ and $s_{IP} = 1$) | 37 |
| Annex E (informative) | Contribution to the uncertainty calculation | 38 |
| Bibliography | | 39 |
