

ISO/TS 22176:2020-01 (E)

Cosmetics - Analytical methods - Development of a global approach for validation of quantitative analytical methods

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms, definitions and symbols	1
	3.1 Terms and definitions	1
	3.2 Symbols	5
4	General principles	6
	4.1 Reminder	6
	4.2 Various conditions for the estimation of precision	6
	4.3 Accuracy profile	7
5	Procedure	9
	5.1 Definition of the measured quantity	9
	5.2 Definition of objectives	9
	5.2.1 Choice of the scope of validation	9
	5.2.2 Choice of acceptance limits	9
	5.3 Selection of validation samples	10
	5.3.1 Choice of the type of matrix or types of matrices	10
	5.3.2 Methods for establishing reference values	10
	5.4 Characterization plan for validation	10
	5.4.1 Organization	10
	5.4.2 Choice of the number of series, repetitions and concentrations for the characterization plan for validation	11
	5.5 Calibration plan for the indirect methods	11
	5.5.1 Organization	11
	5.5.2 Choice of the number of series, repetitions and concentrations for the calibration plan	12
	5.6 Testing	13
	5.7 Calculation of predicted inverse concentrations for indirect methods	14
	5.7.1 General	14
	5.7.2 Calculation of the calibration models	14
	5.7.3 Calculation of back-calculated concentrations by inverse prediction	15
	5.8 Calculation of the validation criteria by concentration level	15
	5.8.1 General	15
	5.8.2 Trueness criteria by series	15
	5.8.3 Trueness and precision criteria by concentration	16
	5.8.4 Calculation of the tolerance intervals	17
	5.9 Construction of the accuracy profile	18
	5.10 Interpretation of the accuracy profile for validation	19
	5.10.1 General	19
	5.10.2 Decision rules	20
	5.10.3 Definition of the scope of validity	21
	5.10.4 Choice of a calibration procedure for the routine	21
	5.10.5 Influence and significance of the β proportion	21
	5.10.6 Identification of outliers	22

6	Management of the outcomes during routine use	22
Annex A (normative)	Calculation of repeatability, intermediate precision and reproducibility standard deviations	23
Annex B (normative)	Contents of the validation file	25
Annex C (informative)	Setting-up an assay for determining the accuracy profile in the case of NDELA in cosmetic samples	27
Annex D (informative)	Influence of the value of β on the tolerance interval ($R = 3$ and $s_{IP} = 1$)	37
Annex E (informative)	Contribution to the uncertainty calculation	38
Bibliography	39
