ISO 22174:2024-08 (E)

Microbiology of the food chain - Polymerase chain reaction (PCR) for the detection and quantification of microorganisms - General requirements and definitions

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1
3.1 General terms 2
3.2 Terms related to the extraction and purification of DNA/RNA 3
3.3 Terms related to reverse transcription of RNA to DNA 4
3.4 Terms related to DNA amplification by PCR/RT-PCR 4
3.5 Terms related to controls 5
3.6 Terms related to qPCR 6
3.7 Terms related to dPCR 7

4 Principle 8
4.1 General 8
4.2 Laboratory sample 9
4.3 Sampling, transport and storage 9
4.4 Preparation of test sample 9

5 Microbial enrichment and virus concentration 9
5.1 Microbial enrichment 9
5.2 Virus concentration 9

6 Nucleic acid preparation 10
6.1 General 10
6.2 Prevention of amplification of DNA from dead cells 10
6.3 Nucleic acid extraction, release and purification 10
6.4 Nucleic acid quality and quantity 10

7 PCR amplification 11

8 Detection and confirmation of amplicons 11

9 General environmental laboratory requirements 12
9.1 General 12
9.2 Laboratory setup 12
9.2.1 General 12
9.2.2 Control of flows 13
9.2.3 Cleaning of laboratory 14
9.2.4 Environmental monitoring for nucleic acid contamination 14

10 Reagents and consumables 14

11 Equipment 14

12 Procedure 15
12.1 Enrichment and sample treatment 15
12.2 Amplification 16
12.2.1 General 16

12.2.2 Control reaction 16
12.2.3 Detection of amplicon 18
12.2.4 Data analysis 18
12.3 Evaluation 19
12.3.1 Qualitative evaluation 19
12.3.2 Quantitative evaluation 20
12.4 Test report 21

13 Performance characteristics of PCR-based methods 21

14 Validation and verification of PCR-based methods 21
14.1 General 21
14.2 Validation 21
14.3 Verification 22

Annex A (informative) Fluorescence signals and amplification curve 23

Bibliography 26
