Foreword 2

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5
3.1 General definitions 5
3.2 Terms relative to extraction and purification of DNA 9
3.3 Terms referring to DNA amplification and PCR 9
3.4 Definitions referring to DNA and PCR controls 9
3.5 Terms relative to reference materials 11
3.6 Terms relative to quantitation 11
3.7 Terms relative to GMOs 11

4 Application to the relevant International Standards 11
4.1 General 11
4.2 Guidance for the user on the selection of methods 12
4.2.1 General 12
4.2.2 Methods using protein as the analytical target 12
4.2.3 Methods using DNA as the analytical target 13
4.3 Performance characteristics 13
4.3.1 General 13
4.3.2 Limit of detection (LOD) 13
4.3.3 Limit of quantitation (LOQ) 14

5 General laboratory and procedural requirements 14
5.1 General 14
5.2 Use of controls 14
5.3 Laboratory organization 16
5.3.1 General 16
5.3.2 Laboratory design 16
5.3.3 Personnel 16
5.3.4 Apparatus and equipment 16
5.3.5 Materials and reagents 17

6 Interpretation and expression of results 17
6.1 General 17
6.2 Interpretation of controls 17
6.3 Expression of a negative result 18
6.4 Expression of a positive result 18
6.5 Expression of ambiguous results 18
6.6 Quality assurance requirements 19

7 Test report 19
