ISO 2017-2:2007-12 (E)

Mechanical vibration and shock - Resilient mounting systems - Part 2: Technical information to be exchanged for the application of vibration isolation associated with railway systems

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Vibration of railway systems 2

5 Purpose of vibration isolation (why isolate mechanical systems) 3

6 What is to be isolated 4
6.1 Source isolation 4
6.2 Receiver isolation 4

7 Applicability of vibration isolation (when to isolate structures or mechanical systems) 4

8 Measurement and evaluation of vibration conditions 5

9 Information for the choice of an isolation mounting system 5

10 Information to be supplied by the railway system authority 6

11 Information to be supplied by the receiver producer and user 7
11.1 Buildings 7
11.2 Sensitive equipment 7

12 Information to be provided by the supplier of the isolation system 8
12.1 Performance of isolation system 8
12.2 Physical data of the isolation system 8
12.3 Dynamic behaviour 9
12.4 Durability 9
12.5 Environmental data 9
12.6 Maintenance data 9

13 Guidelines for the validation of isolation performance 10
