Characterization of pavement texture by use of surface profiles - Part 4: Spectral analysis of surface profiles

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Basic outline of methodologies of spatial frequency analysis	6
5	Sampling of surface profiles	8
5.1	Sampling of road sections	8
5.2	Measurement of laboratory samples	9
6	General principles and requirements	9
6.1	Requirements concerning profilometers	9
6.2	Conversion of spatial frequencies to temporal frequencies	9
6.3	Drop-outs	11
6.4	Anti-aliasing filtering	12
6.5	Digital sampling	12
7	Spectral analysis in constant-percentage bandwidth bands (octave- or one-third-octave bands) by analogue filtering (Method 1)	13
8	Spectral analysis in constant-percentage bandwidth bands (octave- or one-third-octave bands) by digital filtering (Method 2)	15
9	Spectral analysis in narrow constant bandwidth bands by means of Discrete (Fast) Fourier Transform methods (Method 3)	15
9.1	Overview of methodology	15
9.2	Slope and offset suppression	16
9.3	Windowing	16
9.4	Discrete Fourier Transform and Power Spectral Density	18
9.5	Wavelength resolution	19
10	Transformation of constant bandwidth spectral data to constant-percentage bandwidth spectral data	19
11	Uncertainty of analysis results	21
12	Reporting of analysis results	22
Annex A (normative) Uncertainty of spectral analysis results		23
Annex B (informative) Aliasing		28
Annex C (informative) Estimation of the deviation in energy within a frequency band caused by variations in speed		30
Annex D (informative) Compensation for speed variations during processing of the measured data		31

Annex E (informative) Explanation of the relation between the wavelength resolution and the spatial frequency resolution	32
Annex F (informative) Spectral analysis and profile asymmetry	33
Bibliography	35
