

ISO/TR 11688-2:1998-09 (E)

Acoustics - Recommended practice for the design of low-noise machinery and equipment - Part 2: Introduction to the physics of low-noise design

| Contents | | Page |
|---|--|-------------|
| 1 | Scope | 1 |
| 2 | References | 1 |
| 3 | Definitions | 1 |
| 4 | Acoustical modelling | 1 |
| 5 | Control of airborne and liquid-borne noise | 2 |
| 5.1 | Generation of fluid-dynamic noise | 2 |
| 5.2 | Noise control measures..... | 8 |
| 6 | Control of structure-borne sound..... | 10 |
| 6.1 | Model of sound generation | 10 |
| 6.2 | Internal sources..... | 15 |
| 6.3 | Transmission of structure-borne sound | 18 |
| 6.4 | Control of structure-borne sound transmission by damping..... | 28 |
| 6.5 | Radiation | 30 |
| 7 | Analysis by measurement methods | 35 |
| 7.1 | Purpose of the analysis | 35 |
| 7.2 | Internal sources..... | 36 |
| 7.3 | Transmission paths..... | 36 |
| 7.4 | Radiation | 36 |
| 7.5 | Summary of procedures for the analysis of existing machinery by measurement methods | 37 |
| 8 | Analysis by computational methods..... | 39 |
| 8.1 | Purpose of the analysis | 39 |
| 8.2 | Deterministic methods..... | 39 |
| 8.3 | Statistical methods..... | 39 |
| 8.4 | Applicability of computational methods | 39 |
| Annex A Example of the estimation of airborne sound emission of a machine caused by structure-borne and airborne sound emission from a component | | 41 |
| Annex B Glossary..... | | 44 |
| Bibliography..... | | 46 |
