

ISO 4866:2010-03 (E)

Mechanical vibration and shock - Vibration of fixed structures - Guidelines for the measurement of vibrations and evaluation of their effects on structures

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Source-related factors to be considered	2
5	Structure-related factors to be considered	3
6	Quantities to be measured	4
7	Frequency range and vibration amplitude	5
8	Instrumentation	5
9	Position and mounting of transducers	7
10	Data collection, analysis and assessment	10
11	Methods of measurement and reporting	12
12	Evaluation of vibration responses	14
Annex A (informative) Values of structural response		16
Annex B (informative) Classification of buildings		18
Annex C (informative) Random data		23
Annex D (informative) Predicting natural frequencies and damping of buildings		24
Annex E (informative) Vibrational interaction of the foundation of a structure and the soil		30
Bibliography		36
