## Acoustics - Determination of sound power levels and sound energy levels of noise sources using sound pressure - Precision methods for reverberation test rooms

---

<b>Contents</b>	<b>Page</b>
Foreword .....	iv
Introduction .....	v
1 Scope .....	1
2 Normative references .....	2
3 Terms and definitions .....	2
4 Reference meteorological conditions .....	6
5 Reverberation test room .....	6
6 Instrumentation and measurement equipment .....	10
7 Definition, location, installation, and operation of noise source under test .....	10
8 Measurements in the reverberation test room .....	12
9 Determination of sound power levels and sound energy levels .....	19
10 Measurement uncertainty .....	27
11 Information to be recorded .....	30
12 Test report .....	31
Annex A (informative) Guidelines for the design of reverberation test rooms .....	32
Annex B (informative) Guidelines for the design of rotating diffusing vanes .....	34
Annex C (normative) Reverberation test room qualification procedure for the measurement of broad-band sound .....	35
Annex D (normative) Reverberation test room qualification procedure for the measurement of discrete-frequency components .....	37
Annex E (informative) Extension of frequency range to frequencies below 100 Hz .....	42
Annex F (normative) Calculation of octave band sound power levels and sound energy levels, A-weighted sound power levels and A-weighted sound energy levels from one-third-octave band levels .....	45
Annex G (informative) Guidelines on the development of information on measurement uncertainty .....	48
Bibliography .....	60
