

DIN EN ISO 14257:2011-11 (E)

Acoustics - Measurement and parametric description of of spatial sound distribution curves in workrooms for evaluation of their acoustical performance (ISO 14257:2001)

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Sound distribution in a room	7
4.1	General	7
4.2	Spatial sound distribution curves	7
5	Measurement of the spatial sound distribution curve	9
5.1	Specifications regarding the sound source used for the test	9
5.2	Measurement instrumentation	10
5.3	Measurement path and points	11
5.4	Measurement procedure	12
5.5	Representation of the measured data	12
6	Parametric description of the measured spatial sound distribution curve in view of evaluation of the acoustical performance of workrooms	13
6.1	General	13
6.2	Distance ranges	13
6.3	Determination of the rate of spatial decay of sound pressure levels per distance doubling, DL2	13
6.4	Determination of the excess of sound pressure level with respect to a reference sound distribution curve, DLf	14
6.5	Evaluation of measured data	16
7	Information to be recorded and reported	16
Annex A (normative)	Performance requirements for the sound source to be used for the test	18
Annex B (normative)	Correction of measured sound distribution curves to account for differences in ground reflections and source directivity	20
Annex C (informative)	Example of use of this International Standard	21
