## Mechanical vibration - Rotor balancing - Part 31: Susceptibility and sensitivity of machines to unbalance

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		vi
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Machine susceptibility classification .....	1
4.1	General .....	1
4.2	Type I: Low susceptibility .....	2
4.3	Type II: Moderate susceptibility .....	2
4.4	Type III: High susceptibility .....	2
4.5	Machine susceptibility correction factors .....	2
5	Modal sensitivity .....	2
5.1	General .....	2
5.2	Modal sensitivity ranges .....	3
5.3	Characteristics of modal sensitivity ranges .....	3
5.4	Values of modal sensitivity .....	3
5.5	Operating speed .....	7
5.6	Transient speed .....	9
6	Experimental determination of modal sensitivity near resonance speed under operational conditions .....	10
6.1	General .....	10
6.2	Nyquist diagram procedure .....	10
6.3	Bode diagram procedure .....	10
7	Numerical values for the local sensitivity .....	11
8	Experimental determination of the local sensitivity .....	12
8.1	General .....	12
8.2	Procedure .....	12
9	Damped unbalance sensitivity analysis .....	13
Annex A (informative)	Explanations of terms .....	14
Annex B (informative)	Example of polar plot diagram procedure .....	16
Annex C (informative)	Examples of classification according to modal sensitivity .....	17
Annex D (informative)	Example of mathematical model applied unbalance .....	18
Bibliography .....		19
