Mechanical vibration - Rotor balancing - Part 31: Susceptibility and sensitivity of machines to unbalance

Contents	Page
Foreword	iv
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Machine susceptibility classification	1
4.1 General	1
4.2 Type I: Low susceptibility	2
4.3 Type II: Moderate susceptibility	2
4.4 Type III: High susceptibility	2
4.5 Machine susceptibility correction factors	2
5 Modal sensitivity	2
5.1 General	2
5.2 Modal sensitivity ranges	3
5.3 Characteristics of modal sensitivity ranges	3
5.4 Values of modal sensitivity	3
5.5 Operating speed	7
5.6 Transient speed	9
6 Experimental determination of modal sensitivity near resonance speed under operational conditions	10
6.1 General	10
6.2 Nyquist diagram procedure	10
6.3 Bode diagram procedure	10
7 Numerical values for the local sensitivity	11
8 Experimental determination of the local sensitivity	12
8.1 General	12
8.2 Procedure	12
9 Damped unbalance sensitivity analysis	13
Annex A (informative) Explanations of terms	14
Annex B (informative) Example of polar plot diagram procedure	16
Annex C (informative) Examples of classification according to modal sensitivity	17
Annex D (informative) Example of mathematical model applied unbalance	18
Bibliography	19
