ISO/TS 14837-32:2015-12 (E)

Mechanical vibration - Ground-borne noise and vibration arising from rail systems - Part 32: Measurement of dynamic properties of the ground

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Symbols 1

4 Transmission of ground-borne noise and vibration 3
4.1 General 3
4.2 Ground-borne noise versus vibration -- Effect of frequency 4

5 Parameters for wave propagation in the ground 4
5.1 General 4
5.2 Fundamental wave propagation parameters 4
5.3 Material loss and non-linearity 9
5.4 Geometry effects, stratification and lateral variability of the ground 13
5.5 Nearfield effects 15
5.6 Anisotropy 15
5.7 Ground water effects -- Ground materials as a two-phase medium 16

6 Methods for parameter estimation and measurement 16
6.1 Stratification and classification of the ground: Boring logs and seismic investigations 16
6.2 Soils versus rock 17
6.3 Empirical estimation methods based on index parameters 17
6.3.1 General 17
6.3.2 Effective (bulk) mass density 18
6.3.3 Wave speeds and elastic shear modulus 18
6.3.4 Non-linearity and material loss factor 21
6.4 Indirect determination from geotechnical in-situ penetration tests 25
6.4.1 General 25
6.4.2 Cone penetration test 26
6.4.3 Standard penetration test 26
6.5 Direct in-situ measurement of dynamic ground parameters 27
6.5.1 General 27
6.5.2 Surface wave measurements 30
6.5.3 Down-hole (and up-hole) measurements -- Seismic CPT (S-CPT) 33
6.5.4 Cross-hole measurements 36
6.5.5 Other measurements -- Refraction and multi-channel p- and s-wave reflection, resistivity 39
6.5.6 Other in-situ methods 40
6.6 Laboratory measurement of dynamic ground parameters 40
6.6.1 General 40
6.6.2 Piezo measurements 41
6.6.3 Resonant column testing 43
6.6.4 Cyclic triaxial, DSS and torsional shear testing 44

7 Strategy for ground parameter determination 44
7.1 General 44
7.2 Expected severity of ground-borne vibration and noise 44

7.3 Parameter estimation from available information 44
7.4 Summary of in-situ measurements versus laboratory measurements 45
7.5 Direct measurement of vibration and noise propagation as an alternative to measuring dynamic properties and use of calculation models 45

Annex A (informative) Abbreviations used in this part of ISO 14837 47
