

ISO 10326-1:2016-10 (E)

Mechanical vibration - Laboratory method for evaluating vehicle seat vibration - Part 1: Basic requirements

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General	2
5	Instrumentation	2
5.1	Acceleration transducers	2
5.2	Transducer mounting	2
5.2.1	General	2
5.2.2	Transducer mounting on the platform	3
5.2.3	Transducer mounting on the seat pan and/or backrest	3
5.3	Frequency weighting	4
5.4	Calibration	4
6	Vibration equipment	4
6.1	Physical characteristics	4
6.2	Control system	5
7	Safety requirements	5
8	Test conditions	5
8.1	Test seat	5
8.1.1	General	5
8.1.2	Run-in periods for suspension seats	5
8.1.3	Measurement of suspension travel and adjustment to weight of test person	6
8.1.4	Inclination of backrest	7
8.2	Test persons and posture	7
8.3	Other possibilities	8
9	Test input vibration	9
9.1	General	9
9.2	Simulated input vibration test	9
9.3	Tolerances on input vibration	10
9.4	Transfer function with sinusoidal vibration input	10
9.5	Damping test	10
9.5.1	Suspension seats	10
9.5.2	Other seats	11
10	Test procedure	11
10.1	General	11
10.2	Simulated input vibration test	11
10.3	Damping test	12
11	Acceptance	12

12	Test report	12
Annex A (informative)	Test method for assessing the ability of a seat suspension to control the effects of impacts caused by over-travel	14
Annex B (informative)	Example of a simulated input test signal specified by the PSD	20
