Acoustics - Methods for calculating loudness - Part 2: Moore-Glasberg method

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General	5
5	Specifications of signals	5
5.1	General	5
5.2	Complex tone	5
5.3	Noise consisting of bands of pink or white noise of defined width	5
5.4	Mixture of discrete sinusoidal components and bands of pink or white noise	6
5.5	Sound specified in terms of the sound pressure levels in 29 adjacent one-third- octave bands	6
6	Instrumentation	6
7	Description of the method	7
7.1	Introduction	7
7.2	Determination of sound spectrum at the tympanic membrane	7
7.2.1	General	7
7.2.2	Free field and diffuse field transfer functions for sound picked up by a single microphone	8
7.2.3	Earphones	8
7.2.4	Signal recorded at eardrum	8
7.2.5	Head and torso simulator	8
7.2.6	Interpolation and extrapolation	8
7.3	Determination of sound spectrum at the oval window	9
7.4	Transformation of sound spectrum into excitation pattern	10
7.5	Transformation of excitation pattern into specific loudness	13
7.5.1	Introduction	13
7.5.2	Reference excitation at the reference threshold of hearing	14
7.5.3	Gain of the cochlear amplifier for inputs with low sound pressure levels	14
7.5.4	Calculation of specific loudness from excitation when $E_{THRQ}/E_0 \leq E/E_0$	15
7.5.5	Calculation of specific loudness from excitation when $E_{THRQ}/E_0 > E/E_0$	15
7.5.6	Calculation of specific loudness from excitation when $E > 10I_0$	15
8	Calculation of loudness and loudness level	16
8.1	Calculation of monaural and binaural loudness (diotic and dichotic stimuli)	16
8.2	Relationship between loudness level and loudness	17
8.3	Calculation of the reference threshold of hearing	18
9	Uncertainty of calculated loudness for stationary sounds	18
10	Data reporting	19
Annex A (informative)	Comments regarding binaural loudness	20

Annex B (informative) Results for specific test signals	21
Annex C (informative) Software for the calculation of loudness	26
Bibliography	27
