DIN EN ISO 11690-1:2021-04 (E)

Acoustics - Recommended practice for the design of low-noise workplaces containing machinery - Part 1: Noise control strategies (ISO 11690-1:2020)

Contents

Page

European foreword 3

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Termsanddefinitions 6
3.1 General noise descriptors 6
3.2 Noise emission descriptors 7
3.3 Noise immission and noise exposure 9
3.4 Noise reduction 11

4 Basic concepts in noise control 16
4.1 Basic noise control strategy 16
4.2 Concept of noise reduction 16

5 Assessment of the noise situation 17
5.1 Quantities for noise emission, noise immission and noise exposure 17
5.1.1 Noise emission quantities [see 3.2 and Figure 1 a)] 17
5.1.2 Noise immission and noise exposure quantities [see 3.3 and Figures 1 b), 1 c) and 2] 17
5.2 Description of the noise situation 18
5.3 Use of noise information sheets and noise maps 19

6 Parties involved 20

7 How to tackle noise problems in workplaces 20
7.1 Noise control objectives 20
7.2 Principles of noise control planning for new and existing workplaces 21
7.2.1 General 21
7.2.2 Preliminary planning and design stage 22
7.2.3 Planning and design stage 22
7.2.4 Implementation stage 23
7.2.5 Assessment and acceptance stage 24
7.3 Dealing with existing noise problems 24

8 What to do before buying a new machine 24
8.1 Questions that a potential buyer should consider 24
8.2 What information to request from potential suppliers 25
8.3 Declared and additional noise emission values 27
8.4 Meaning and use of noise emission values 27
8.5 Requirements for noise immission levels 28
8.6 Verification of declared noise emission and/or noise immission levels 28
8.7 Developments 28

9 Noise prediction as a planning tool 29

10 Long-term noise control programme 29
