DIN EN ISO 3381:2022-09 (E)

Railway applications - Acoustics - Noise measurement inside railbound vehicles (ISO 3381:2021)

Contents

Page

European foreword **5**

Foreword **6**

1 Scope **7**

2 Normative references **7**

3 Terms and definitions **8**

4 Instrumentation and calibration **9**
4.1 Instrumentation 9
4.2 Calibration 9

5 Measurement positions **10**
5.1 Division of the unit into areas 10
5.1.1 General 10
5.1.2 Definition of area types 10
5.1.3 Definition of area acoustics 10
5.1.4 Selection of areas to be assessed 10
5.2 Measurement positions 12
5.3 Measurement height 13
5.3.1 Seating position 13
5.3.2 Standing position 13
5.3.3 Lying position 13
5.3.4 Driving position 14

6 Stationary test **15**
6.1 General 15
6.2 Environmental conditions 15
6.2.1 Acoustical environment 15
6.2.2 Meteorological conditions 15
6.2.3 Background sound pressure level 16
6.3 Track conditions 16
6.4 Vehicle conditions 16
6.4.1 General 16
6.4.2 Normal operating conditions 16
6.4.3 Additional operating conditions 17
6.5 Measured quantities 17
6.6 Test procedure 17
6.7 Data processing 17
6.7.1 Standard processing 17
6.7.2 Additional processing 18

7 Testing in cabs when sounding an external warning horn **18**
7.1 Environmental conditions 18
7.1.1 Acoustical environment 18
7.1.2 Meteorological conditions 19
7.1.3 Background sound pressure level 19
7.2 Track conditions 19
7.3 Vehicle conditions 19
7.4 Measured quantities 19
7.5 Test procedure 19
7.6 Data processing 20
7.6.1 Standard processing 20
7.6.2 Additional processing 20

8 Constant speed test 20
8.1 General 20
8.2 Environmental conditions 21
8.2.1 Acoustical environment 21
8.2.2 Meteorological conditions 21
8.2.3 Background sound pressure level 21
8.3 Track conditions 21
8.3.1 General 21
8.3.2 Track design 21
8.3.3 Track superstructure 22
8.3.4 Track quality 22
8.3.5 Rail roughness and track dynamic properties 22
8.3.6 Special conditions 22
8.4 Vehicle conditions 22
8.4.1 General 22
8.4.2 Normal operating conditions 23
8.4.3 Occupancy and load 23
8.4.4 Wheel tread conditioning 23
8.4.5 Additional conditions 24
8.5 Measured quantities 24
8.6 Test procedure 24
8.6.1 General 24
8.6.2 Test speeds 24
8.6.3 Measurement time intervals 25
8.7 Data processing 25
8.7.1 Standard processing 25
8.7.2 Additional processing 26

9 Acceleration from stand-still test and deceleration to stand-still test 26
9.1 General 26
9.2 Environmental conditions 26
9.2.1 Acoustical environment 26
9.2.2 Meteorological conditions 27
9.2.3 Background sound pressure level 27
9.3 Track conditions 27
9.4 Vehicle conditions 27
9.4.1 General 27
9.4.2 Normal operating conditions 28
9.4.3 Occupancy and load 28
9.4.4 Wheel tread conditions 29
9.5 Test procedure for the acceleration test 29
9.6 Test procedure for the deceleration test 29
9.7 Maximum level method 29
9.7.1 Measured quantities 29
9.7.2 Data processing 29
9.8 Averaged level method 30
9.8.1 Measured quantity 30
9.8.2 Data processing 30

10 Quality of the measurements 31
10.1 Deviations from the requirements 31
10.2 Positional tolerances 31
10.3 Measurement spread 31
10.4 Measurement uncertainties 31

11 Test report 31

Annex A (informative) **Guidance on the definition and reporting of vehicle conditions** **33**
Annex B (informative) **Method to characterize the impulsive character of the noise** **34**
Annex C (normative) **Acoustic track characteristics** **36**
Annex D (informative) **Specific environments** **40**
Annex E (informative) **Quantification of measurement uncertainties according to ISO/IEC Guide 98-3** **43**
Bibliography **47**
