

DIN EN ISO 17201-6:2022-09 (E)

Acoustics - Noise from shooting ranges - Part 6: Sound pressure measurements close to the source for determining exposure to sound (ISO 17201-6:2021)

Contents		Page
European foreword		3
Foreword		4
Introduction		5
1	Scope	6
2	Normative references	6
3	Terms and definitions	6
4	Measurement system requirements	7
4.1	General	7
4.2	Ranges of sound pressure levels	7
4.3	Overall system description	7
4.4	Microphone and preamplifier requirements	8
4.5	Microphone fixture	8
4.6	Cable length	8
4.7	Wind screens	9
4.8	Data acquisition system	9
4.9	Data storage	9
4.10	Frequency-weighting	9
4.11	Field calibration	9
5	Measurement setup	10
5.1	General considerations	10
5.2	Measurement location	10
5.3	Special case: Weapons fixture	10
5.4	Persons in the shooting range	10
5.5	Simultaneous multi-location measurements	11
5.6	Exception: Absence of persons influencing the exposure to sound	11
5.7	Microphone orientation	11
5.8	Weather and ambient conditions	11
6	Documentation	11
6.1	General	11
6.2	Shooting range	11
6.3	Absorbing and reflecting elements	11
6.4	Sound source documentation	11
6.5	Location of the primary source of the sound	11
6.6	Shooter	12
6.7	Measurement location	12
6.8	Weather and ambient conditions	12
7	Data evaluation and uncertainties	12
7.1	General	12
7.2	Evaluating discrete time data	12
7.3	Frequency-weighting	12
7.4	Measurement uncertainties	13
Annex A (informative) Slew rate limitations for impulse sound measurements		14
Annex B (informative) Calculations with discrete-time data		18
Annex C (informative) Calculating C-weighted time series using a digital filter		20
