Characterization of pavement texture by use of surface profiles - Part 4: One third octave band spectral analysis of surface profiles

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Symbols and abbreviated terms	4
5	Basic outline of methodologies of spatial frequency analysis	5
6	Sampling of surface profiles	7
6.1	Requirements concerning profilometers and data preparations	7
6.2	Sampling of road sections	7
6.3	Measurement of laboratory samples	7
6.4	Texture profile levels (logarithmic scale)	8
6.5	Anti-aliasing filtering	8
6.6	Drop-out correction and interpolation	8
6.7	Resampling to a constant spatial resolution	10
6.8	Spike identification and reshaping the profile	10
7	Spectral analysis in constant-percentage bandwidth bands (octave- or one-third-octave bands) by digital filtering	10
8	Uncertainty of analysis results	11
9	Reporting of analysis results	12
Annex A (normative) Uncertainty of spectral analysis results		13
Annex B (informative) Spectral analysis and profile asymmetry		18
Annex C (informative) Spectral analysis by means of discrete (fast) Fourier transform methods		19
Annex D (normative) Spike removal procedure		27
Annex E (informative) Testing the calculation procedure		30
Annex F (normative) Profile conditioning before filtering		32
Bibliography		35
