ISO/TS 22270:2026-07 (E)

Mechanical vibration - Practical guidance and requirements for the monitoring and measurement of hand-transmitted vibration on the hand, wrist or forearm

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 On-body monitoring overview 2
4.1 General 2
4.2 Potential advantages 3
4.2.1 Compact measurement systems 3
4.2.2 Safety 3
4.2.3 Long-term monitoring 3
4.2.4 Information on exposure patterns 3
4.2.5 Customisable to the individual 3
4.2.6 Large data sets 3
4.2.7 Application to ISO 5349-1 compliant exposure assessments 3
4.2.8 Other advantages 4
4.3 Limitations 4
4.3.1 ISO 5349-1 measurement locations 4
4.3.2 Vibration transmission to on-body locations 4
4.3.3 Measurement artefact 5
4.4 Data protection 5

5 Monitoring 6
5.1 Selection and specification of location for on-body monitoring 6
5.2 Choice of hand 6
5.3 Transducer orientation 6
5.4 Vibration transmission characteristics 7
5.5 On-body monitoring device/system 7
5.5.1 Transducer 7
5.5.2 Transducer fixing force 7
5.5.3 Mass and size of the attached monitoring system 7
5.5.4 Connection with ISO 8041-2 8
5.5.5 Repeatability and reproducibility 8
5.5.6 Verification of the monitoring system 8
5.5.7 In situ checks (sensitivity checks and self-testing) 8
5.5.8 Comparison against ISO 5349-1 measurements 8
5.5.9 Evaluation of vibration transfer characteristics 9

6 Signal processing 9
6.1 General 9
6.2 Error/artefact handling 10
6.3 Attached monitoring system 11

7 Reporting 11
7.1 General 11
7.2 Instrument characteristics 11

7.3 Monitoring system validation 11
7.4 Results 12
7.5 Supplementary information 12

Annex A (informative) Evaluation of vibration transfer characteristics for on-body monitoring systems 13

Annex B (informative) Example of on-body monitoring validation and test reports 15
