## Acoustics - Measurement and parametric description of spatial sound distribution curves in workrooms for evaluation of their acoustical performance

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Sound distribution in a room .....	3
4.1	General .....	3
4.2	Spatial sound distribution curves .....	3
5	Measurement of the spatial sound distribution curve .....	5
5.1	Specifications regarding the sound source used for the test .....	5
5.2	Measurement instrumentation .....	6
5.3	Measurement path and points .....	7
5.4	Measurement procedure .....	8
5.5	Representation of the measured data .....	8
6	Parametric description of the measured spatial sound distribution curve in view of evaluation of the acoustical performance of workrooms .....	9
6.1	General .....	9
6.2	Distance ranges .....	9
6.3	Determination of the rate of spatial decay of sound pressure levels per distance doubling, DL2 .....	9
6.4	Determination of the excess of sound pressure level with respect to a reference sound distribution curve, DLf .....	10
6.5	Evaluation of measured data .....	12
7	Information to be recorded and reported .....	12
Annex A (normative) Performance requirements for the sound source to be used for the test .....		14
Annex B (normative) Correction of measured sound distribution curves to account for differences in ground reflections and source directivity .....		16
Annex C (informative) Example of use of this International Standard .....		17
Bibliography .....		25
