ISO 7235:2003-08 (E)

Acoustics - Laboratory measurement procedures for ducted silencers and air-terminal units - Insertion loss, flow noise and total pressure loss

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Symbols 7

5 Test facilities and requirements for instrumentation 9
5.1 Purpose and types of test facilities 9
5.2 Equipment for acoustic testing of silencers 9
5.3 Equipment for acoustic testing of air-terminal units 15
5.4 Equipment for flow testing 16
5.5 Equipment for dynamic testing 21

6 Test procedures 22
6.1 General 22
6.2 Insertion loss 22
6.3 Transmission loss 24
6.4 Sound power level of the flow noise (or regenerated sound) 24
6.5 Volume flow rate and pressure loss coefficient 25

7 Information to be recorded 29
7.1 Description of the test object 29
7.2 Instrumentation 29
7.3 Sound-source equipment 30
7.4 Test, substitution and transmission ducts 30
7.5 Transitions 30
7.6 Anechoic termination 30
7.7 Reverberation room 30
7.8 Acoustical test results 30
7.9 Measurement uncertainty 31

8 Information to be reported 31

Annex A (normative) Design of the sound field excitation equipment and qualification tests 32

Annex B (normative) Transmission element 34

Annex C (normative) Duct walls and limiting insertion loss 37

Annex D (normative) Conversion of one-third-octave-band attenuation values to octave-band attenuation values 40

Annex E (normative) Measurements on large parallel-baffle silencers 41

Annex F (normative) Test of longitudinal attenuation 43

Annex G (informative) Anechoic terminations 44

Annex H (informative) Examples of measurement arrangements 46

Bibliography 48
