

DIN EN ISO 5802:2011-10 (E)

Industrial fans - Performance testing in situ (ISO 5802:2001)

Contents		Page
Foreword		4
Introduction		5
1	Scope	6
2	Normative references	6
3	Terms, definitions and symbols	6
3.1	Terms and definitions	6
3.2	Symbols	19
4	Quantities to be measured	23
5	General conditions and procedures concerning in situ tests	23
5.1	General recommendations	23
5.2	Selection of test point when only the system resistance can be varied	23
5.3	Fans fitted with adjustment devices	24
5.4	System throttling devices allowing the system resistance to be altered	24
5.5	Selection of the test point when the system resistance cannot be varied	24
5.6	When correction of the coefficient deduced from the test is not necessary	25
6	Instrumentation	25
6.1	Instrumentation for measurement of pressure	25
6.2	Measurement of air velocity	26
6.3	Measurement of temperature	28
6.4	Determination of density	29
6.5	Measurement of rotational speed	30
7	Determination of fan pressure	30
7.1	Location of pressure measurement plane	30
7.2	Measurement of fan pressure	32
8	Determination of flowrate	41
8.1	Choice of measuring method	41
8.2	Choice of measuring section	41
8.3	Determination of flowrate using differential pressure devices	43
8.4	Determination of flowrate by velocity area methods	43
9	Determination of power	60
9.1	Definition of performance characteristics relating to the power of a fan	60
9.2	Losses during transmission of power from the motor to the impeller	62
9.3	Methods for determination of power	62
9.4	Measuring instruments	65
9.5	Precautions to be taken during in situ tests	65
10	Uncertainty associated with the determination of fan performance	65
10.1	General	65
10.2	Performance errors	66
10.3	Uncertainty of measurement	66
10.4	Specified uncertainties	66
10.5	Analysis of uncertainty	66

Annex A (normative) Position of exploration lines for a marginal wall profile compatible with a general power law	73
Annex B (normative) Determination of the position of the marginal exploration lines in cases not covered by annex A	77
Annex C (normative) Minimum straight lengths required upstream and downstream of the differential pressure devices (DP device) used for flow measurement	80
Annex D (normative) Loss allowance for straight, smooth ducts and standardized airways	88
Annex E (normative) Rotating vane anemometer calibration	90
Bibliography	92
