ISO 10094-2:2010-10 (E)

Pneumatic fluid power - Electro-pneumatic pressure control valves - Part 2: Test methods to determine main characteristics to include in the supplier's literature

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Symbols and units 2

5 Test conditions 3
5.1 Gas supply 3
5.2 Temperature 3
5.3 Pressures 3
5.4 Electrical supply 3

6 Test procedures 3
6.1 Test conditions 3
6.2 Inlet pressure 3
6.3 Static tests 4

7 Control signal/pressure static-characteristics test at null forward or relief flow rate 4
7.1 Test installation 4
7.2 Test procedures 5
7.3 Calculation of characteristics 6

8 Flow/pressure static characteristics test 10
8.1 Test circuit for flow rate measurement 10
8.2 General requirements 11
8.3 Test procedures 11
8.4 Calculation of characteristics 12

9 Pressure regulation characteristics test 14
9.1 Test circuit 14
9.2 Test procedure 14

10 Leakage at null forward flow rate or relief flow rate characteristic test 15
10.1 Test circuit 15
10.2 Test procedure 15
10.3 Calculation of characteristic 15

11 Dynamic characteristics 16
11.1 Step responses 16
11.2 Frequency responses 20

12 Presentation of test results 21
12.1 General 21
12.2 Control signal/pressure static characteristics 22
12.3 Flow rate/pressure characteristics 22

12.4 Pressure regulation characteristics 22
12.5 Leakage characteristic 22
12.6 Dynamic characteristics 22

Annex A (informative) Calculation procedures of gain and phase lag 23

Bibliography 27
