FOREWORD.....	7
INTRODUCTION.....	9
1 Scope.....	10
2 Normative references .....	10
3 Terms, definitions and conventions.....	12
3.1 Terms and definitions .....	12
3.2 Conventions .....	15
4 Symbols, abbreviations and units .....	17
4.1 Symbols and units .....	17
4.2 Abbreviations .....	21
5 Design for reliability.....	23
5.1 Design lifetime and reliability.....	23
5.2 Design process .....	24
5.3 Documentation .....	26
5.4 Quality plan.....	26
6 Drivetrain operating conditions and loads .....	27
6.1 Drivetrain description .....	27
6.1.1 General .....	27
6.1.2 Interface definition.....	27
6.1.3 Specified requirements across interfaces.....	28
6.2 Deriving drivetrain loads.....	28
6.2.1 Wind turbine load simulation model .....	28
6.2.2 Wind turbine load calculations .....	29
6.2.3 Reliability of load assumptions .....	29
6.3 Results from wind turbine load calculations .....	29
6.3.1 General .....	29
6.3.2 Time series.....	30
6.3.3 Fatigue load .....	30
6.3.4 Extreme loads .....	31
6.4 Operating conditions .....	31
6.4.1 General .....	31
6.4.2 Environmental conditions.....	31
6.4.3 Operating strategies .....	32
6.5 Drivetrain analysis.....	32
7 Gearbox design, rating, and manufacturing requirements .....	32
7.1 Gearbox cooling .....	32
7.2 Gears .....	33
7.2.1 Gear reliability considerations.....	33
7.2.2 Gear rating .....	33
7.2.3 Load factors .....	34
7.2.4 Gear materials.....	36
7.2.5 Subsurface initiated fatigue .....	37
7.2.6 Gear accuracy .....	37
7.2.7 Gear manufacturing .....	37
7.3 Bearings.....	38
7.3.1 General .....	38

7.3.2	Bearing reliability considerations .....	38
7.3.3	Bearing steel quality requirements .....	39
7.3.4	General design considerations .....	39
7.3.5	Bearing interface requirements .....	42
7.3.6	Bearing design issues .....	43
7.3.7	Bearing lubrication .....	46
7.3.8	Rating calculations .....	47
7.4	Shafts, keys, housing joints, splines and fasteners .....	50
7.4.1	Shafts .....	50
7.4.2	Shaft-hub connections .....	50
7.4.3	Flexible splines .....	51
7.4.4	Shaft seals .....	51
7.4.5	Fasteners .....	51
7.4.6	Circlips (snap rings) .....	52
7.5	Structural elements .....	52
7.5.1	Introduction .....	52
7.5.2	Reliability considerations .....	53
7.5.3	Deflection analysis .....	53
7.5.4	Strength verification .....	53
7.5.5	Static strength assessment .....	54
7.5.6	Fatigue strength assessment .....	58
7.5.7	Material tests .....	62
7.5.8	Documentation .....	63
7.6	Lubrication .....	63
7.6.1	General considerations .....	63
7.6.2	Type of lubricant .....	64
7.6.3	Lubricant characteristics .....	65
7.6.4	Method of lubrication .....	66
7.6.5	Oil quantity .....	67
7.6.6	Operating temperatures .....	68
7.6.7	Temperature control .....	68
7.6.8	Lubricant condition monitoring .....	69
7.6.9	Lubricant cleanliness .....	69
7.6.10	Lubricant filter .....	70
7.6.11	Ports .....	71
7.6.12	Oil level indicator .....	71
7.6.13	Magnetic plugs .....	71
7.6.14	Breather .....	72
7.6.15	Flow sensor .....	72
7.6.16	Serviceability .....	72
8	Design verification .....	72
8.1	General .....	72
8.2	Test planning .....	72
8.2.1	Identifying test criteria .....	72
8.2.2	New designs or substantive changes .....	73
8.2.3	Overall test plan .....	73
8.2.4	Specific test plans .....	73
8.3	Workshop prototype testing .....	74
8.3.1	General .....	74

8.3.2	Component testing .....	74
8.3.3	Workshop testing of a prototype gearbox .....	74
8.3.4	Lubrication system testing .....	75
8.4	Field test .....	75
8.4.1	General .....	75
8.4.2	Validation of loads .....	75
8.4.3	Type test of gearbox in wind turbine .....	76
8.5	Production testing .....	77
8.5.1	Acceptance testing .....	77
8.5.2	Sound emission testing .....	77
8.5.3	Vibration testing .....	77
8.5.4	Lubrication system considerations .....	77
8.5.5	System temperatures .....	77
8.6	Robustness test .....	77
8.7	Field lubricant temperature and cleanliness .....	77
8.8	Bearing specific validation .....	78
8.8.1	Design reviews .....	78
8.8.2	Prototype verification/validation .....	78
8.9	Test documentation .....	79
9	Operation, service and maintenance requirements .....	79
9.1	Service and maintenance requirements .....	79
9.2	Inspection requirements .....	79
9.3	Commissioning and run-in .....	79
9.4	Transport, handling and storage .....	80
9.5	Repair .....	80
9.6	Installation and exchange .....	80
9.7	Condition monitoring .....	80
9.8	Lubrication .....	80
9.8.1	Oil type requirements .....	80
9.8.2	Lubrication system .....	80
9.8.3	Oil test and analysis .....	81
9.9	Operations and maintenance documentation .....	81
Annex A (informative)	Examples of drivetrain interfaces and loads specifications .....	82
Annex B (informative)	Gearbox design and manufacturing considerations .....	93
Annex C (informative)	Bearing design considerations .....	96
Annex D (informative)	Considerations for gearbox structural elements .....	122
Annex E (informative)	Recommendations for lubricant performance in wind turbine gearboxes .....	125
Annex F (informative)	Design verification documentation .....	140
Annex G (informative)	Bearing calculation documentation .....	143
Bibliography	.....	151
Figure 1	– Shaft designation in 3-stage parallel shaft gearboxes .....	15
Figure 2	– Shaft designation in 3-stage gearboxes with one planet stage .....	16
Figure 3	– Shaft designation in 3-stage gearboxes with two planet stages .....	17
Figure 4	– Design process flow chart .....	25
Figure 5	– Examples of bearing selection criteria .....	39

Figure 6 – Blind bearing assembly .....	45
Figure 7 – Definition of section factor $n_{pl,\sigma}$ of a notched component .....	56
Figure 8 – Idealized elastic plastic stress-strain curve .....	57
Figure 9 – Synthetic S/N curve (adapted from Haibach, 2006) .....	60
Figure A.1 – Modular drivetrain .....	82
Figure A.2 – Modular drivetrain with 3-point suspension .....	83
Figure A.3 – Integrated drivetrain.....	83
Figure A.4 – Reference system for modular drivetrain.....	85
Figure A.5 – Rear view of drivetrain .....	86
Figure A.6 – Reference system for modular drivetrain with 3-point suspension .....	87
Figure A.7 – Reference system for integrated drivetrain.....	88
Figure A.8 – Example of rainflow counting per DLC .....	90
Figure A.9 – Example of load revolution distribution (LRD) .....	91
Figure C.1 – Load bin reduction by lumping neighbouring load bins .....	97
Figure C.2 – Consumed life index (CLI) .....	99
Figure C.3 – Time share distribution .....	99
Figure C.4 – Effects of clearance and preload on pressure distribution in radial roller bearings (from Brandlein et al, 1999) .....	102
Figure C.5 – Nomenclature for bearing curvature .....	103
Figure C.6 – Stress distribution over the elliptical contact area .....	105
Figure C.7 – Examples of locating and non-locating bearing arrangements.....	114
Figure C.8 – Examples of locating bearing arrangements.....	114
Figure C.9 – Examples of accommodation of axial displacements .....	114
Figure C.10 – Examples of cross-locating bearing arrangements .....	115
Figure C.11 – Examples of bearing arrangements with paired mounting.....	115
Figure D.1 – Locations of failure for local (A) and global (B) failure.....	123
Figure D.2 – Local and global failure for two different notch radii .....	123
Figure D.3 – Haigh-diagram for evaluation of mean stress influence (Haibach, 2006) .....	124
Figure E.1 – Viscosity requirements versus pitch line velocity.....	126
Figure E.2 – Test apparatus for filterability evaluation.....	134
Figure E.3 – Example for circuit design of combined filtration and cooling system.....	138
Table 1 – Symbols used in the document.....	18
Table 2 – Abbreviations .....	21
Table 3 – Mesh load factor $K_\gamma$ for planetary stages .....	35
Table 4 – Required gear accuracy .....	37
Table 5 – Temperature gradients for calculation of operating clearance .....	44
Table 6 – Bearing lubricant temperature for calculation of viscosity ratio, $\kappa$ .....	46
Table 7 – Guide values for maximum contact stress at Miner's sum dynamic equivalent bearing load.....	49
Table 8 – Minimum safety factors for the different methods.....	50
Table 9 – Partial safety factors for materials .....	55
Table 10 – Partial safety factors $\gamma_m$ for synthetic S/N-curves of cast iron materials.....	61
Table 11 – Recommended cleanliness levels.....	70

Table A.1 – Drivetrain elements and local coordinate systems .....	84
Table A.2 – Drivetrain element interface dimensions .....	85
Table A.3 – Interface requirements for modular drivetrain .....	86
Table A.4 – Interface requirements for modular drivetrain with 3-point suspension .....	87
Table A.5 – Interface requirements for integrated drivetrain .....	88
Table A.6 – Engineering data and required design load descriptions .....	89
Table A.7 – Rainflow matrix example .....	89
Table A.8 – Example of load duration distribution (LDD) .....	91
Table A.9 – Extreme load matrix example .....	92
Table B.1 – Recommended gear tooth surface roughness .....	94
Table C.1 – Guide values for basic rating life $L_{h10}$ for preliminary bearing selection .....	96
Table C.2 – Static load factors for radial bearings .....	101
Table C.3 – Bearing types for combined loads with axial loads in double directions .....	110
Table C.4 – Bearing types for combined loads with axial loads in single direction .....	111
Table C.5 – Bearing types for pure radial load .....	112
Table C.6 – Bearing types for axial load .....	113
Table C.7 – Bearing selection: Legend .....	116
Table C.8 – Bearing selection: Low speed shaft (LSS) / planet carrier .....	117
Table C.9 – Bearing selection: Low speed intermediate shaft (LSIS) .....	118
Table C.10 – Bearing selection: High speed intermediate shaft (HSIS) .....	119
Table C.11 – Bearing selection: High speed shaft (HSS) .....	120
Table C.12 – Bearing selection: Planet bearing .....	121
Table D.1 – Typical material properties .....	122
Table E.1 – Viscosity grade at operating temperature for oils with $VI = 90$ .....	127
Table E.2 – Viscosity grade at operating temperature for oils with $VI = 120$ .....	128
Table E.3 – Viscosity grade at operating temperature for oils with $VI = 160$ .....	129
Table E.4 – Viscosity grade at operating temperature for oils with $VI = 240$ .....	130
Table E.5 – Standardized test methods for evaluating WT lubricants (fresh oil) .....	132
Table E.6 – Non-standardized test methods for lubricant performance (fresh oil) .....	133
Table E.7 – Guidelines for lubricant parameter limits .....	136
Table F.1 – Design validation and verification documentation .....	140
