

ISO 25745-2:2015-04 (E)

Energy performance of lifts, escalators and moving walks - Part 2: Energy calculation and classification for lifts (elevators)

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Data collection and analysis tools	2
5	Calculation of energy consumption	3
5.1	Methodology	3
5.2	Calculation of running energy per day	3
5.2.1	Usage and number of starts per day	3
5.2.2	Average travel distance	4
5.2.3	Average running energy per metre	4
5.2.4	Start/stop energy consumption	4
5.2.5	Running energy of an average cycle with empty car	5
5.2.6	Daily running energy	5
5.3	Calculation of non-running (idle/standby) energy consumption per day	6
5.3.1	Running time per day	6
5.3.2	Non-running time per day	7
5.3.3	Time ratios of idle/standby modes	7
5.3.4	Daily non-running (idle/standby) energy consumption	8
5.4	Total energy consumption per day	8
5.5	Total energy consumption per year	8
5.6	Method for determining the daily energy consumption for energy storage systems	8
6	Lift energy efficiency classification	9
6.1	Rationale	9
6.2	Performance level for running	9
6.3	Performance levels for idle/standby	10
6.4	Classification of energy performance of the lift	10
7	Specific running energy for the reference cycle	11
8	Reporting	11
Annex A (informative)	Specific usage category	13
Annex B (informative)	Example calculation	14
Annex C (informative)	Symbols	16
Bibliography		18
