ISO/TR 16194:2017-04 (E)

Pneumatic fluid power - Assessment of component reliability by accelerated life testing - General guidelines and procedures

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols and units 3

5 Concepts of reliability and accelerated life testing 3

6 Failure mechanism and mode 4

7 Strategy of conducting accelerated life testing 4

8 Design of accelerated life testing 5
8.1 Normal use conditions 5
8.2 Preliminary tests 5
8.3 Levels of accelerated stress 6
8.4 Sample size 7
8.5 Data observation and measurement 7
8.6 Types of stress loading 7

9 End of test 8
9.1 Minimum number of failures required 8
9.2 Termination cycle count 8
9.3 Suspended or censored test units 8

10 Statistical analysis 9
10.1 Analysis of failure data 9
10.2 Life distribution 9
10.3 Accelerated life testing model 10
10.4 Data analysis and parameter estimation 10

11 Reliability characteristics from the test data 11

12 Test report 12

Annex A (informative) Determining stress levels when stress is time-dependent 13

Annex B (informative) Life-stress relationship models 17

Annex C (informative) Verification of compromise Weibull slopes 26

Annex D (informative) Calculation procedures for censored data 32

Annex E (informative) Examples of using accelerated life testing in industrial applications 35

Annex F (informative) Palmgren-Miner's rule 37

Annex G (informative) ALT experimental results for pneumatic cylinder 39
