ISO 18888:2017-10 (E)

Gas turbine combined cycle power plants - Thermal performance tests

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Symbols and units 6

5 Test boundary 7

6 Preparation for test 11
6.1 General 11
6.2 Performance degradation 12
6.3 Measurement classification 12
6.4 Design and construction phase recommendations 12
6.5 Test procedure 13
6.6 Field preparations for the performance test 14
6.7 Instruments and measuring methods 16
6.7.1 General 16
6.7.2 Electrical power measurement 16
6.7.3 Flow measurements 17
6.7.4 Temperature measurements 18
6.7.5 Relative humidity measurements 22
6.7.6 Pressure measurements 23
6.7.7 Data acquisition system 25
6.7.8 Wind velocity 25
6.7.9 Storage vessel levels 25
6.7.10 Data sampling 26
6.8 Determination of fuel properties 26
6.8.1 General 26
6.8.2 Tests on fuel gas 27
6.8.3 Tests on liquid fuel 27
6.9 Determination of cooling water flow into the condenser 28
6.9.1 General 28
6.9.2 Energy balance method 28
6.9.3 Cooling water pump performance curves 31
6.9.4 Direct flow measurement 32
6.10 Measurement uncertainties 32
6.11 Maximum allowable uncertainties 34
6.12 Calibration 35

7 Execution of test 36
7.1 Base reference conditions 36
7.1.1 General 36
7.1.2 Specified gaseous fuel 37
7.1.3 Specified liquid fuel 37
7.2 Preliminary test 38
7.3 Performance test 38

7.4 Duration of test runs 39
7.5 Auxiliary equipment operation 39
7.6 Tests with inlet air heating system 39
7.7 Tests with inlet air cooling system 40
7.8 Maximum permissible variation in operation conditions 40

8 Calculation of results for absolute test 41
8.1 General 41

8.2 Correction to base reference conditions 41
8.2.1 General 41
8.2.2 Correction curves based correction approach 42
8.2.3 Thermodynamic heat balance model based correction approach 43
8.2.4 Boundary parameters for correction 44
8.2.5 Description of corrections to base reference conditions 46
8.3 Power output for combined cycle overall test 50
8.3.1 Measured power output 50
8.3.2 Power output corrected to nominal power factor 52
8.3.3 Corrected power output 52
8.4 Heat rate for combined cycle overall test 53
8.4.1 Measured heat rate/measured thermal efficiency 53
8.4.2 Corrected heat rate / corrected thermal efficiency 53
8.5 Power output of steam turbine determination for combined cycle in single shaft configuration 54

9 Part load tests 54
9.1 General 54
9.2 Test set up and conduct 55
9.3 Correction method for part loads 57

10 Calculation of results for comparative test 57
10.1 General 57
10.2 Comparative performance test uncertainty 57
10.3 Preparation for comparative test 58
10.3.1 Instrumentation 58
10.3.2 Preliminary activities and plant settings 58
10.4 Execution of comparative tests and calculation of results 59

11 Test report 59
11.1 Form of the report 59
11.2 Detailed report 60

Annex A (informative) Typical secondary variables 61

Annex B (informative) Numerical examples of uncertainty calculation 64

Annex C (informative) Procedure for power factor conversion 69

Bibliography 73
