## Gas turbine combined cycle power plants - Thermal performance tests

---

<b>Contents</b>		<b>Page</b>
Foreword .....		v
Introduction .....		vi
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	2
4	Symbols and units .....	6
5	Test boundary .....	7
6	Preparation for test .....	11
6.1	General .....	11
6.2	Performance degradation .....	12
6.3	Measurement classification .....	12
6.4	Design and construction phase recommendations .....	12
6.5	Test procedure .....	13
6.6	Field preparations for the performance test .....	14
6.7	Instruments and measuring methods .....	16
6.7.1	General .....	16
6.7.2	Electrical power measurement .....	16
6.7.3	Flow measurements .....	17
6.7.4	Temperature measurements .....	18
6.7.5	Relative humidity measurements .....	22
6.7.6	Pressure measurements .....	23
6.7.7	Data acquisition system .....	25
6.7.8	Wind velocity .....	25
6.7.9	Storage vessel levels .....	25
6.7.10	Data sampling .....	26
6.8	Determination of fuel properties .....	26
6.8.1	General .....	26
6.8.2	Tests on fuel gas .....	27
6.8.3	Tests on liquid fuel .....	27
6.9	Determination of cooling water flow into the condenser .....	28
6.9.1	General .....	28
6.9.2	Energy balance method .....	28
6.9.3	Cooling water pump performance curves .....	31
6.9.4	Direct flow measurement .....	32
6.10	Measurement uncertainties .....	32
6.11	Maximum allowable uncertainties .....	34
6.12	Calibration .....	35
7	Execution of test .....	36
7.1	Base reference conditions .....	36
7.1.1	General .....	36
7.1.2	Specified gaseous fuel .....	37
7.1.3	Specified liquid fuel .....	37
7.2	Preliminary test .....	38
7.3	Performance test .....	38

7.4	Duration of test runs .....	39
7.5	Auxiliary equipment operation .....	39
7.6	Tests with inlet air heating system .....	39
7.7	Tests with inlet air cooling system .....	40
7.8	Maximum permissible variation in operation conditions .....	40
8	Calculation of results for absolute test .....	41
8.1	General .....	41
8.2	Correction to base reference conditions .....	41
8.2.1	General .....	41
8.2.2	Correction curves based correction approach .....	42
8.2.3	Thermodynamic heat balance model based correction approach .....	43
8.2.4	Boundary parameters for correction .....	44
8.2.5	Description of corrections to base reference conditions .....	46
8.3	Power output for combined cycle overall test .....	50
8.3.1	Measured power output .....	50
8.3.2	Power output corrected to nominal power factor .....	52
8.3.3	Corrected power output .....	52
8.4	Heat rate for combined cycle overall test .....	53
8.4.1	Measured heat rate/measured thermal efficiency .....	53
8.4.2	Corrected heat rate / corrected thermal efficiency .....	53
8.5	Power output of steam turbine determination for combined cycle in single shaft configuration .....	54
9	Part load tests .....	54
9.1	General .....	54
9.2	Test set up and conduct .....	55
9.3	Correction method for part loads .....	57
10	Calculation of results for comparative test .....	57
10.1	General .....	57
10.2	Comparative performance test uncertainty .....	57
10.3	Preparation for comparative test .....	58
10.3.1	Instrumentation .....	58
10.3.2	Preliminary activities and plant settings .....	58
10.4	Execution of comparative tests and calculation of results .....	59
11	Test report .....	59
11.1	Form of the report .....	59
11.2	Detailed report .....	60
	Annex A (informative) Typical secondary variables .....	61
	Annex B (informative) Numerical examples of uncertainty calculation .....	64
	Annex C (informative) Procedure for power factor conversion .....	69
	Bibliography .....	73
