ISO 8102-6:2019 (E)

Electrical requirements for lifts, escalators and moving walks — Part 6: Programmable electronic systems in safety-related applications for escalators and moving walks (PESSRAE)

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Requirements

- 4.1 General
- 4.2 Extended application of this document
- 4.2.1 General
- 4.2.2 Risk assessment
- 4.2.3 Limits for specifying SIL for PESSRAE
- 4.2.4 Safe-state requirements
- 4.3 Safety function SIL requirements
- 4.4 SIL relevant and non-SIL relevant safe state requirements
- 4.5 Implementation and demonstration requirements for verification of SIL compliance
- 4.5.1 General
- 4.5.2 Required techniques and measures to implement and demonstrate PE systems compliance with specified safety integrity levels in this document
- 4.5.3 Loss of power after a PESSRAE device has actuated

Annex A (normative) Techniques and measures to implement, verify, and maintain SIL compliance

- A.1 General
- A.1.1 Techniques and measures to be used to satisfy the SIL requirements of this document
- A.1.2 Instruction manual
- A.1.2.1 General
- A.1.2.2 General requirements on maintenance and repair for the instruction manual
- A.1.3 Maintenance or maintainability design requirements
- A.1.4 EMC immunity
- A.2 Techniques and measures to implement and demonstrate SIL compliance using IEC 61508-2 and IEC 61508-3
- A.2.1 General requirements
- A.2.2 Implementation and SIL compliance

Annex B (informative) Example of risk reduction decision table
