Equipment for harvesting — Forage harvesters — Part 3: Test methods

Contents

	Foreword
1	Scope
2	Normative references
3	Terms and definitions
4	General requirements
5	Machine requirements for test
6	Specific performance tests
6.1	General
6.2	Selection of crops
6.3	Reference machine
6.4	Operator competence
6.5	Preparations for performance tests
6.6	Instrumentation and test apparatus
6.7	Test procedure
6.7.1	Output and specific energy requirement tests
6.7.2	Front end losses
6.7.3	Length of cut analysis
7	Test report
7.1	Basic information
7.2	Additional information and observations
7.2.1	General
7.2.2	Basic records
7.2.3	Assessment procedure
7.2.3.1	General
7.2.3.2	All forage harvesters
7.2.3.3	Self-propelled forage harvesters
7.2.4	Durability and reliability
7.2.5	Effectiveness of safety provisions
Annex A	(informative) Determination of geometric mean length of cut and geometric standard deviation from results of length of cut analysis
A.1	Rationale
A.2	Calculation of cut parameters
A.2.1	Geometric mean length, \bar{x}
A.2.2	Geometric standard deviation, σ
A.2.3	Calculation procedure
A.3	Length of cut parameters – Graphical determination
A.3.1	General
A.3.2	Geometric mean length, \bar{x}
A.3.3	Geometric standard deviation, σ
A.4	Example of determination of \bar{x} and σ
A.4.1	Mass distribution
A.4.2	Calculated values of \bar{x} and σ
A.4.2.1	Arithmetic mean length in class interval
A.4.2.2	Geometric mean length in class interval
A.4.2.3	Values found from graph of data in Figure A.1
A.5	Interquartile range
