ISO 8178-5:2021 (E)

Reciprocating internal combustion engines — Exhaust emission measurement — Part 5: Test fuels

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Choice of fuel

5.1 General
5.2 Influence of fuel properties on emissions from compression ignition engines
5.2.1 General
5.2.2 Fuel sulfur
5.2.3 Specific considerations for marine fuels
5.2.4 Other fuel properties
5.3 Influence of fuel properties on emissions from spark ignition (SI) engines

6 Overview of fuels

6.1 Natural gas
6.1.1 Reference natural gas
6.1.2 Reference natural gas supplied from a pipeline with admixture
6.1.3 Non-referenced natural gas
6.2 Liquefied petroleum gas
6.2.1 Referenced liquefied petroleum gas
6.2.2 Non-referenced liquefied petroleum gas
6.3 Engine gasolines
6.3.1 Referenced engine gasolines
6.3.2 Non-referenced engine gasolines
6.4 Diesel fuels
6.4.1 Diesel reference fuels
6.4.2 Non-referenced diesel fuels
6.5 Distillate fuel oils
6.6 Residual fuel oils
6.7 Crude oil
6.8 Alternative fuels
6.9 Requirements and additional information

Annex A (informative) Calculation of the fuel specific factors

A.1 Fuel specific factors
A.2 Estimation of the fuel composition without elemental analysis
A.2.1 General
A.2.2 Method 1
A.2.3 Method 2
A.2.4 Method 3
A.3 Ignition quality
A.3.1 Application
A.3.2 Derivation of CII and CCAI

Annex B (informative) Equivalent non-ISO test methods

Annex C (informative) Supplementary requirements for conducting emission testing using gaseous reference fuels comprising pipeline gas with admixture of other gases

C.1 Method of gas analysis and gas flow measurement
C.2 Analysis and flowrate of incoming utility gas supply
C.3 Analysis and flowrate of admixture
C.4 Analysis of blended gas
C.5 Calculation of Sλ and MN of the blended gas
C.6 Control and verification of gas blend during the test
C.6.1 General
C.6.2 Open loop blend control system
C.6.3 Closed loop blend control system

Annex D (normative) Calculation of λ-Shift factor (Sλ)

D.1 Calculation
D.2 Examples for the calculation of the λ-shift factor Sλ:

Annex E (normative) Correction for CO2 in the exhaust gas arising from CO2 in the gaseous fuel

E.1 Instantaneous mass flow rate of CO2 in the gaseous fuel stream
E.2 Calculation of specific CO2 emissions for transient (NRTC and LSI-NRTC) test cycles and RMC
E.3 Calculation of specific CO2 emissions for discrete-mode NRSC
