

ISO 8178-9:2000-10 (E)

Reciprocating internal combustion engines - Exhaust emission measurement - Part 9: Test cycles and test procedures for test-bed measurement of exhaust gas smoke emissions from compression ignition engines operating under transient conditions

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Symbols and units	5
5	Test conditions	6
6	Test fuels	7
7	Measurement equipment and accuracy	8
8	Calibration of the opacimeter	10
9	Test run	11
10	Data evaluation and calculation	11
11	Determination of smoke	16
Annex A (normative) Test cycle for variable-speed off-road engines		20
Annex B (normative) Test cycle for constant-speed off-road engines		27
Annex C (informative) Remarks on test cycles		31
Annex D (informative) Example of calculation procedure		32
Bibliography		42
