

ISO 8178-9:2000-10 (E)

Reciprocating internal combustion engines - Exhaust emission measurement - Part 9: Test cycles and test procedures for test-bed measurement of exhaust gas smoke emissions from compression ignition engines operating under transient conditions

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Symbols and units	5
5 Test conditions	6
6 Test fuels	7
7 Measurement equipment and accuracy	8
8 Calibration of the opacimeter	10
9 Test run	11
10 Data evaluation and calculation	11
11 Determination of smoke	16
Annex A (normative) Test cycle for variable-speed off-road engines	20
Annex B (normative) Test cycle for constant-speed off-road engines	27
Annex C (informative) Remarks on test cycles	31
Annex D (informative) Example of calculation procedure	32
Bibliography	42
