## Wind energy generation systems - Part 4: Design requirements for wind turbine gearboxes

---

Contents	Page
FOREWORD .....	6
INTRODUCTION .....	8
1 Scope .....	9
2 Normative references .....	10
3 Terms, definitions, abbreviated terms, units and conventions .....	13
3.1 Terms and definitions .....	13
3.2 Abbreviated terms and units .....	15
3.3 Conventions .....	18
3.3.1 Shaft designations – examples for typical wind turbine gearbox architecture .....	18
4 Design process .....	20
4.1 General .....	20
4.2 Gearbox type .....	21
4.3 Design life, service life, and reliability .....	22
4.4 Component class and consequence of failure .....	22
4.5 Design process .....	22
5 Gearbox interfaces and loads .....	25
5.1 General .....	25
5.2 Interfaces .....	25
5.3 Loads .....	25
5.4 Drivetrain dynamics .....	26
5.4.1 General .....	26
5.4.2 Model requirements .....	26
5.4.3 Required analyses .....	27
5.4.4 Evaluation of excitability .....	28
5.4.5 Verification of dynamic behaviour in system environment .....	28
6 Design and rating requirements .....	29
6.1 Gears .....	29
6.1.1 Reliability considerations .....	29
6.1.2 Calculation of gear load capacity .....	29
6.1.3 Load factors .....	33
6.1.4 Materials .....	35
6.1.5 Accuracy .....	35
6.1.6 Manufacturing .....	35
6.2 Rolling bearings .....	36
6.2.1 Reliability considerations .....	36
6.2.2 Bearing selection .....	39
6.2.3 Materials .....	40
6.2.4 Interface requirements .....	40
6.2.5 Design considerations .....	41
6.2.6 Bearing lubrication .....	43
6.2.7 Rating calculations .....	44

6.3	Plain bearings	47
6.3.1	Reliability considerations	47
6.3.2	Design load cases and associated risks	47
6.3.3	Interface requirements	49
6.3.4	Shaft and housing fits	50
6.3.5	Hydrodynamic lubrication regime	50
6.3.6	Lubricant regime analysis	51
6.3.7	Bearing requirements	51
6.4	Shafts, keys, housing joints, splines, and fasteners	52
6.4.1	Shafts	52
6.4.2	Shaft-hub connections	53
6.4.3	Shaft seals	53
6.4.4	Fasteners	53
6.4.5	Bolted joints	54
6.4.6	Circlips	55
6.5	Structural elements	55
6.5.1	General	55
6.5.2	Interfaces, boundary conditions, and loads	56
6.6	Lubrication	56
6.6.1	General	56
6.6.2	Lubricant performance characteristics	56
6.6.3	Lubricant viscosity	56
6.6.4	Method of lubrication and cooling	57
6.6.5	Quantity of lubricant in the lubrication system	57
6.6.6	Operating temperatures	58
6.6.7	Temperature control	58
6.6.8	Lubricant condition monitoring	59
6.6.9	Lubricant filtration	59
6.6.10	Ports	60
6.6.11	Lubricant level indicator	60
6.6.12	Magnetic plugs	60
6.6.13	Breather port	60
6.6.14	Flow sensor	61
7	Design verification and design validation	61
7.1	General	61
7.2	Design verification and validation plan	61
7.3	Failure mode categorization	61
7.4	Verification methods	62
7.4.1	General	62
7.4.2	Testing	62
7.4.3	Similarity	64
7.4.4	Simulation	65
7.5	Verification and validation matrix	65
8	Manufacturing and quality assurance	69
8.1	General	69
8.2	Quality plan	69
8.2.1	General	69
8.2.2	Surface temper inspection of gears after grinding	69
8.2.3	Surface roughness inspection	69
8.3	Critical processes	69
8.4	Statistical process control	69
8.5	Factory acceptance testing	70
8.5.1	Test objectives	70

8.5.2	Acceptance test plan .....	70
8.5.3	Factory test sequences.....	70
8.5.4	Acceptance measurements.....	71
8.6	Non-conforming components.....	71
8.6.1	General .....	71
8.6.2	Grinding notches .....	72
9	Design for service and operation .....	72
9.1	General.....	72
9.2	Service and operation design requirements.....	72
9.3	Service and operation documentation requirements .....	72
9.4	Safety .....	73
Annex A (informative)	Examples of drivetrain interfaces and loads specifications .....	74
A.1	General.....	74
A.2	Common wind turbine drivetrain architectures.....	74
A.2.1	Non-integrated drivetrain with 4-point suspension.....	74
A.2.2	Non-integrated drivetrain with 3-point suspension.....	75
A.2.3	Integrated drivetrain .....	75
A.2.4	Interfaces .....	78
A.2.5	Coordinate system.....	78
A.2.6	Interface descriptions .....	78
A.2.7	Engineering data at the interface .....	80
A.3	Wind turbine load descriptions .....	80
A.3.1	Load description formats .....	80
A.3.2	Rainflow matrices .....	81
A.3.3	Load revolution distribution.....	82
A.3.4	Extreme load descriptions.....	83
A.4	Wind turbine reference power and speed .....	84
A.4.1	General .....	84
A.4.2	Wind turbine power control theory .....	84
A.4.3	Practicalities of power control .....	85
Annex B (informative)	Dynamic gearbox model verification and validation.....	87
B.1	General.....	87
B.2	Verification of drivetrain dynamics models .....	87
B.3	Validation of drivetrain dynamics models .....	87
	Bibliography.....	90
	Figure 1 – Shaft designation in 3-stage parallel shaft gearboxes.....	19
	Figure 2 – Shaft designation in 3-stage gearboxes with one planet stage.....	19
	Figure 3 – Shaft designation in 3-stage gearboxes with two planet stages .....	20
	Figure 4 – Shaft designation in 4-stage gearboxes with three planet stages.....	20
	Figure 5 – Design process flow chart .....	23
	Figure 6 – Definition of planet gear rim thickness.....	31
	Figure 7 – Examples of bearing selection criteria .....	39
	Figure 8 – Notional operational conditions and plain bearing risk regions.....	49
	Figure A.1 – Non-integrated drivetrain with 4-point suspension.....	74
	Figure A.2 – Non-integrated drivetrain with 3-point suspension.....	75
	Figure A.3 – Rotor-side integration with rigid main shaft connection .....	76

Figure A.4 – Rotor-side integration with flexible main shaft connection .....	76
Figure A.5 – Generator-side integration with rotor support in generator .....	77
Figure A.6 – Generator-side integration with rotor support in gearbox and generator .....	77
Figure A.7 – Generator-side integration with rotor support in gearbox .....	77
Figure A.8 – Example of rainflow cycles per design load case.....	82
Figure A.9 – Example of a load revolution distribution.....	83
Figure A.10 – Wind turbine power control regions .....	84
Figure A.11 – Ideal power and speed control strategy .....	85
Figure A.12 – Control strategy compared to actual response .....	85
Table 1 – Definition of a gearbox type.....	21
Table 2 – Minimum safety factors for pitting resistance and bending strength .....	30
Table 3 – Mesh load factor for planetary stages.....	33
Table 4 – Required gear accuracy .....	35
Table 5 – Typical temperature differences for calculation of operating clearance .....	42
Table 6 – Bearing lubricant temperature for calculation of viscosity ratio .....	44
Table 7 – Guide values for maximum contact stress.....	46
Table 8 – Plain bearing risks coupled to operating conditions .....	48
Table 9 – Minimum safety factors.....	52
Table 10 – Failure mode categorization .....	62
Table 11 – Verification and validation matrix.....	66
Table A.1 – Analysis information at interfaces for non-integrated drivetrains.....	79
Table A.2 – Analysis information at interfaces for integrated drivetrain .....	80
Table A.3 – Engineering data and design load descriptions.....	80
Table A.4 – Rainflow matrix example .....	81
Table A.5 – Extreme load matrix example .....	83
