Fans - Determination of fan sound power levels under standardized laboratory conditions - Part 4: Sound intensity method

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms, definitions and symbols	2
3.1	Terms and definitions	2
3.2	Symbols -- fan sound power levels	3
3.3	Other symbols	3
4	Instruments and methods of test	4
4.1	General	4
4.2	Reference sound source (RSS)	5
4.3	Calibration and field check	5
4.4	Performance verification	6
4.5	Test method	6
5	Equipment and installation categories	6
5.1	Test environment	6
5.1.1	Background noise	6
5.1.2	Nearby reflecting surfaces	7
5.1.3	Reverberation control	7
5.2	Fan installation	7
5.2.1	Installation categories	7
5.2.2	Aerodynamic performance	8
5.2.3	Mounting methods	8
5.2.4	Duct length	8
5.2.5	Fan total sound testing (installation category E)	9
5.2.6	Fan inlet total sound testing	11
5.2.7	Fan outlet total sound testing	14
5.2.8	Fan casing-radiated sound testing	15
5.3	Measurement surface	15
5.4	Reference sound source (RSS)	18
6	Test method	18
6.1	General	18
6.2	Sampling of sound on the measurement surface	18
6.3	Number of measurements	19
6.4	Observations	19
6.4.1	Point of operation	19
6.4.2	Background sound level	19
6.4.3	Sound intensity	19
6.4.4	Field indicators and qualification requirements	20
6.4.5	Test conditions	20
6.4.6	Information to be recorded	20
7	Calculations	22
7.1	Surface average level	22

7.2	Reference sound source adjustment, RW	23
7.3	Sound power level, LW	23
8	Report and results	24
8.1	Uncertainty of results	24
8.2	Presentation of results	24
8.3	Results	24
8.4	Minimum information to be reported	24
Annex A (informative) Indicators for use in case of difficulty		26
Annex B (normative) Alternative procedure for testing of large fan equipment		27
Annex C (normative) Radiation of sound by fan casing		28
