DIN EN 13001-3-5:2026-03 (E)

Cranes - General design - Part 3-5: Limit states and proof of competence of forged and cast hooks

Contents

Page

European foreword 5

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions, symbols and abbreviations 9
3.1 Terms and definitions 9
3.2 Symbols and abbreviations 10

4 General requirements 13
4.1 Materials 13
4.1.1 Material standards and grades 13
4.1.2 General material requirements 13
4.1.3 Testing of mechanical properties 15
4.2 Hook body geometry 15
4.3 Hook shank machining 17
4.4 Nut 18

5 Static strength 18
5.1 General 18
5.2 Vertical design force 18
5.3 Horizontal design force 19
5.3.1 General 19
5.3.2 Tilting resistance of hook suspension 20
5.4 Bending moment of the shank 20
5.4.1 General 20
5.4.2 Bending moment due to horizontal force 21
5.4.3 Bending moment due to inclination of hook suspension 21
5.4.4 Bending moment due to eccentricity of vertical force 22
5.4.5 Exceptional case for ramshorn hooks 23
5.4.6 Design bending moment of the shank 23
5.5 Hook body, design stresses 24
5.5.1 Loadings 24
5.5.2 Stress determination methods 25
5.5.3 Design stresses applying curved beam bending theory 25
5.6 Hook shank, design stresses 26
5.7 Hook, proof of static strength 26
5.7.1 General for hook body and shank 26
5.7.2 The use of static limit design force for verification of the hook body 27

6 Fatigue strength 28
6.1 General 28
6.2 Vertical fatigue design force 28
6.3 Horizontal fatigue design force 28
6.4 Fatigue design bending moment of shank 29
6.4.1 Bending moment due to horizontal force 29
6.4.2 Bending moment due to inclination of hook suspension 29
6.4.3 Bending moment due to eccentricity of vertical force 29

6.5 Proof of fatigue strength, hook body ... 30
6.5.1 Design stress calculation ... 30
6.5.2 Stress history in general ... 30
6.5.3 Stress history based upon classified duty ... 31
6.5.4 Limit fatigue design stress ... 32
6.5.5 Execution of the proof ... 34
6.5.6 The use of fatigue limit design force for verification of the hook body ... 34
6.6 Proof of fatigue strength, hook shank ... 35
6.6.1 General ... 35
6.6.2 Design stress calculation ... 36
6.6.3 Applied stress cycles ... 36
6.6.4 Basic fatigue strength of material ... 37
6.6.5 Stress concentration effects from geometry ... 37
6.6.6 Fatigue strength of notched shank ... 38
6.6.7 Mean stress influence ... 39
6.6.8 Transformation to stresses at zero mean stress ... 40
6.6.9 Stress history parameter in general ... 41
6.6.10 Stress history parameter based upon classified duty ... 41
6.6.11 Execution of the proof ... 42

Annex A (informative) Sets of single hooks ... 43

A.1 A series of single hooks of type RS/RSN, dimensions of hook bodies ... 43
A.2 A series of single hooks of type RF/RFN, dimensions of hook bodies ... 44
A.3 A series of single hooks of type B, dimensions of hook bodies ... 47

Annex B (informative) A series of ramshorn hooks of type RS/RSN and RF/RFN, dimensions of hook bodies ... 49

Annex C (informative) Dimensional tolerances of hook bodies ... 51

Annex D (informative) Static limit design forces of hook bodies ... 53

D.1 Static limit design forces of hook bodies for hooks of type RS and RF ... 53
D.2 Static limit design forces of hook bodies for a series of hooks of type B, with additional materials ... 54

Annex E (informative) Fatigue limit design forces of hook bodies ... 55

E.1 Fatigue limit design forces of hook bodies for forged hooks of type RS and RF ... 55
E.2 Fatigue limit design forces of hook bodies for a series of hooks of type B, with additional, forged materials ... 57
E.3 Fatigue limit design forces of hook bodies for cast hooks of type RS and RF ... 58
E.4 Fatigue limit design forces of hook bodies for a series of hooks of type B, with additional, cast materials ... 59

Annex F (informative) Sets of hook shank and thread designs ... 60

F.1 A series of hook shank and thread designs, a knuckle thread ... 60
F.2 A series of hook shank and threads, a metric thread ... 62
F.3 A series of hook shank and thread designs, a modified metric thread ... 64
F.4 Hook shank and thread designs for hooks of type B ... 66

Annex G (informative) Bending of curved beams ... 68

G.1 Basic formulae for stresses ... 68
G.2 Approximation of the reference moment of inertia ... 69

Annex H (informative) Calculation of hook suspension tilting resistance, examples ... 71

H.1 Example: Articulation of hook by a hinge ... 71
H.2 Example: Articulation of a hook suspension by a balanced rope reeving ... 72

Annex I (informative) Guidance for the selection of a hook body size using Annexes D and E 74

I.1 General 74
I.2 Case description 74
I.3 Proof of static strength 74
I.4 Proof of fatigue strength 75
I.5 Final selection of hook 75

Annex J (informative) Classification of hook materials 76

Annex K (informative) Workmanship and testing of hooks 77

K.1 Forged hooks 77
K.2 Cast hooks 77
K.3 Scope of material testing and sampling 78
K.4 Test load 78

Annex L (informative) Information for use 80

L.1 Maintenance and inspection 80
L.2 Marking 80
L.3 Safe use 82

Annex M (informative) Overview of standards published by CEN/TC 147 83

M.1 General 83
M.2 Selecting a suitable standard 83

Annex N (informative) List of significant hazards 86

Annex ZA (informative) Relationship between this European Standard and the essential requirements of Directive 2006/42/EC aimed to be covered 87

Annex ZB (informative) Relationship between this European Standard and the essential requirements of Regulation (EU) 2023/1230 aimed to be covered 88
