Wind energy generation systems - Part 4-1: Reliability assessment of drivetrain components in wind turbines

Contents	Page
FOREWORD.....	3
INTRODUCTION	5
1 Scope.....	6
2 Normative references.....	6
3 Terms, definitions, abbreviated terms, units and conventions	7
3.1 Terms and definitions.....	7
3.2 Abbreviated terms and units	8
4 System reliability analysis model.....	10
4.1 General	10
4.2 Failure mode identification, classification, and system element assignment	10
5 Component reliability analysis models	12
5.1 Individual failure modes.....	12
5.2 Gear reliability calculation	12
5.2.1 General.....	12
5.2.2 Estimation of service life for defined failure probabilities	12
5.2.3 Extrapolation of failure probabilities to the design life	16
5.3 Rolling bearing reliability calculation.....	17
5.4 Shaft reliability calculation.....	18
Annex A (informative) Example reliability calculations	20
A.1 General	20
A.2 Example system reliability model.....	20
A.2.1 Identification of components.....	20
A.2.2 Identification of system elements	20
A.2.3 Classification and selection of system elements	21
A.2.4 Arrangement of reliability model and calculation of system reliability	21
A.2.5 Example system assumptions.....	21
A.3 Example gear tooth surface durability (pitting) reliability calculation	22
A.3.1 Example gear assumptions	22
A.3.2 Estimation of service life for defined failure probabilities	22
A.3.3 Extrapolation of failure probabilities to the design life	25
A.4 Example gear tooth bending strength reliability calculation.....	26
A.4.1 Example gear assumptions	26
A.4.2 Estimation of service life for defined failure probabilities	26
A.4.3 Extrapolation of failure probabilities to the design life	28
A.5 Example rolling bearing contact fatigue reliability calculation.....	29
A.6 Example shaft fatigue fracture reliability calculation	29
A.6.1 Example shaft assumptions.....	29
A.6.2 Estimation of life for the nominal failure probability	29
A.6.3 Extrapolation of service life for 10% failure probability	30
A.7 Example system reliability calculation	31
Annex B (informative) Application of the Weibull distribution to rolling bearing fatigue life	32
Bibliography.....	35

Figure 1 – Calculated design versus apparent failure probability	5
Figure 2 – Example of a system elements tree.....	11
Figure 3 – Service-life calculation for a 50 % failure probability (top) from a scaled LRD (bottom)	13
Figure 4 – S-N curve for different failure probabilities (Hein et al. 2018).....	15
Figure A.1 – Functional elements	20
Figure A.2 – System elements	21
Figure A.3 – Service-life calculation with 1 % failure probability S-N curve (bottom) and failure probability (top)	24
Figure A.4 – Lognormal fit for gear pitting failure probability.....	25
Figure A.5 – Lognormal fit for gear bending failure probability.....	28
Figure B.1 – Evaluation of identical data by 2- and 3-parameter Weibull distributions	32
Figure B.2 – Estimation of Weibull parameter γ by 3-parameter Weibull evaluation.....	33
Figure B.3 – Evaluation of identical data by five test scenarios.....	34
Table 1 – Failure probability conversion factors for permissible gear stresses.....	15
Table A.1 – Simplified LRD.....	22
Table A.2 – Contact stress for each load bin	22
Table A.3 – Number of cycles for each load bin	23
Table A.4 – Number of cycles for each load bin	23
Table A.5 – Damage for each load bin	24
Table A.6 – Damage sum, lifetime margin factor, and lifetime	24
Table A.7 – Bending stress for each load bin.....	26
Table A.8 – Number of cycles for each load bin	27
Table A.9 – Number of cycles for each load bin	27
Table A.10 – Damage for each load bin	27
Table A.11 – Damage sum, lifetime margin factor, and lifetime.....	27
Table A.12 – Torsional stress for each load bin	29
Table A.13 – Number of cycles for each load bin	30
Table B.1 – Effect of test scenario on L_{10} and Weibull parameters β and η	34
