## Wind energy generation systems - Part 4-1: Reliability assessment of drivetrain components in wind turbines

---

| Contents  | Page |
|---|------|
| FOREWORD.....   | 3    |
| INTRODUCTION .....  | 5    |
| 1 Scope.....  | 6    |
| 2 Normative references.....   | 6    |
| 3 Terms, definitions, abbreviated terms, units and conventions .....                                | 7    |
| 3.1 Terms and definitions.....  | 7    |
| 3.2 Abbreviated terms and units .....   | 8    |
| 4 System reliability analysis model.....  | 10   |
| 4.1 General .....   | 10   |
| 4.2 Failure mode identification, classification, and system element assignment .....                | 10   |
| 5 Component reliability analysis models .....   | 12   |
| 5.1 Individual failure modes.....   | 12   |
| 5.2 Gear reliability calculation .....  | 12   |
| 5.2.1 General.....  | 12   |
| 5.2.2 Estimation of service life for defined failure probabilities .....                            | 12   |
| 5.2.3 Extrapolation of failure probabilities to the design life .....                               | 16   |
| 5.3 Rolling bearing reliability calculation.....  | 17   |
| 5.4 Shaft reliability calculation.....  | 18   |
| Annex A (informative) Example reliability calculations .....  | 20   |
| A.1 General .....   | 20   |
| A.2 Example system reliability model.....   | 20   |
| A.2.1 Identification of components.....   | 20   |
| A.2.2 Identification of system elements .....   | 20   |
| A.2.3 Classification and selection of system elements .....   | 21   |
| A.2.4 Arrangement of reliability model and calculation of system reliability .....                  | 21   |
| A.2.5 Example system assumptions.....   | 21   |
| A.3 Example gear tooth surface durability (pitting) reliability calculation .....                   | 22   |
| A.3.1 Example gear assumptions .....  | 22   |
| A.3.2 Estimation of service life for defined failure probabilities .....                            | 22   |
| A.3.3 Extrapolation of failure probabilities to the design life .....                               | 25   |
| A.4 Example gear tooth bending strength reliability calculation.....                                | 26   |
| A.4.1 Example gear assumptions .....  | 26   |
| A.4.2 Estimation of service life for defined failure probabilities .....                            | 26   |
| A.4.3 Extrapolation of failure probabilities to the design life .....                               | 28   |
| A.5 Example rolling bearing contact fatigue reliability calculation.....                            | 29   |
| A.6 Example shaft fatigue fracture reliability calculation .....                                    | 29   |
| A.6.1 Example shaft assumptions.....  | 29   |
| A.6.2 Estimation of life for the nominal failure probability .....                                  | 29   |
| A.6.3 Extrapolation of service life for 10% failure probability .....                               | 30   |
| A.7 Example system reliability calculation .....  | 31   |
| Annex B (informative) Application of the Weibull distribution to rolling bearing fatigue life ..... | 32   |
| Bibliography.....   | 35   |
