Industrial automation systems and integration - Manufacturing software capability profiling for interoperability - Part 2: Profiling methodology

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	3
5	Capability profiling method	3
5.1	Capability profiling concept	3
5.2	Capability profiling process	4
5.3	Software requirements analysis process	5
5.4	Software unit selection and verification, or creation process	5
6	Elements and rules for capability profiling	6
6.1	Taxonomy	6
6.2	Capability classes and their content	6
6.3	Capability templates and rules	11
6.4	Capability profiles and rules	12
6.5	Software unit profile database	13
6.6	Rules for matching capability profiles	13
6.7	Interoperability criteria	13
7	Conformance	13
Annex A (informative)	Reference methods	14
A.1	Extensible Markup Language (XML)	14
A.2	Vocabularies, definitions and interchange formats for software packages: Open Software Description (OSD) and Channel Definition Format (CDF)	14
A.3	Distributing software services: Open Distributed Processing (ODP) and Common Object Request Broker Architecture (CORBA)	15
