

ISO 18629-1:2004-11 (E)

Industrial automation systems and integration - Process specification language - Part 1: Overview and basic principles

Contents	Page
1. Scope	1
2. Normative references	1
3. Terms, definitions and abbreviations	2
3.1. Terms and definitions	2
3.2. Abbreviations	8
4.2. The Process Specification Language (PSL) fundamental principles	10
4.3. Requirements for PSL extensions	11
4.3.1. Non-logical Lexicon	11
4.3.2. Specification of Models	12
4.3.3. Axioms of the extensions	12
4.3.4. Grammar for process descriptions	12
4.3.5. Format for extensions	12
5. Conformance testing methodology and framework	20
5.2.1. Conformance of user-defined extensions	21
5.2.2. Conformance of external ontologies	21
5.3. Conformance of future extensions	21
5.3.1. Specification of Models	21
5.3.2. Verification of the extensions	22
Annex C (informative) The Need for Semantics	25
Annex D (informative) Interoperability	28
Annex E (informative) Architecture of PSL	32
Bibliography	36
Index	37
Figures : Figure D1: Interlingua Architecture -	30
Figure D2: Interoperability and PSL	31
Figure E1: The theories in the Outer Core of PSL	33
Figure E2: Definitional extensions of PSL	35
