ISO 8528-1:2005-06 (E)

Reciprocating internal combustion engine driven alternating current generating sets - Part 1: Application, ratings and performance

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Symbols and abbreviations 2

4 Other regulations and additional requirements 2

5 General description 2
5.1 Generating set 2
5.2 Power Station 4

6 Application criteria 4
6.1 Modes of operation 4
6.2 Site criteria 5
6.3 Single and parallel operation 5
6.4 Modes of start-up and control 6
6.5 Start-up time 6

7 Performance classes 7

8 Installation features 8
8.1 General 8
8.2 Installation configurations 8
8.3 Generating set configurations 8
8.4 Mounting types 8
8.5 Connection between the RIC engine and electrical generator 9
8.6 Additional installation features -- Weather effects 9

9 Emissions 10

10 Standard reference conditions 10

11 Site conditions 10
11.1 General 10
11.2 Ambient temperature 10
11.3 Altitude 10
11.4 Humidity 10
11.5 Air quality 10
11.6 Marine environment 11
11.7 Shock and imposed vibration 11
11.8 Chemical pollution 11
11.9 Radiation 11
11.10 Cooling water/liquid 11

12 Power adjustment for operating conditions 11

13 Power rating definitions 12
13.1 General 12

13.2 Power ratings 12
13.3 Power rating categories 12

14 Operating performance 15
14.1 Starting temperature 15
14.2 Load acceptance 15
14.3 Cyclic irregularity 15
14.4 Generator temperature rise 16
14.5 Fuel and lubricating oil characteristics and consumption 16
14.6 Minimum running hours 16
14.7 Regulation 16
