

ISO 22866:2005-06 (E)

Equipment for crop protection - Methods for field measurement of spray drift

Contents		Page
Foreword		iv
1	Scope	1
2	Terms and definitions	1
3	Essential elements of a trial	2
3.1	General	2
3.2	Selection of the trial site	2
3.3	Conduct of trial	3
3.4	Use of a reference spraying system	4
3.5	Measurements of spray drift	4
3.6	Replication of measurements	5
4	Measurement of meteorological conditions	5
5	Acceptable conditions for field measurement of spray drift	6
6	Recording test conditions	6
6.1	Relative to spraying system	6
6.2	Relative to crop and surface in drift sampling zone	6
6.3	Relative to instrumentation and measurement methods used	6
7	Presentation of results	7
Annex A (normative) Definition of directly sprayed area for spray drift measurement		8
Annex B (normative) Description of trial sites and target array for field measurement of spray drift		10
Annex C (informative) Reference spraying systems for field measurement of spray drift		12
Annex D (normative) Selection and handling of spray drift collectors and samplers		13
Annex E (informative) Example presentation for reporting results from field measurement of spray drift		15
Bibliography		17
