ISO 10303-14 :2005-10 (E)

Industrial automation systems and integration_- Product data representation and exchange_- Part_14: Description methods: The EXPRESS-X language reference manual

Contents

1 Scope 1
2 Normative references 2
3 Terms and Definitions 2
3.1 Terms defined in ISO 10303-1 2
3.2 Terms defined in ISO 10303-11 2
3.3 Other definitions 3
4 Fundamental principles 4
4.1 Overview 4
4.2 Fundamental principles of the execution model 5
4.2.1 Overview 5
4.2.2 Binding process 5
4.2.3 Instantiation process 6
4.3 Implementation environment 8
5 Conformance requirements 8
5.1 EXPRESS-X conformance classes 8
5.1.1 Overview 8
5.1.2 EXPRESS-X parser conformance classes 9
5.1.3 EXPRESS-X mapping engine conformance classes 9
5.1.4 Consistency checking of EXPRESS-X parsers 9
6 Language specification syntax 10
7 Basic language elements 11
7.1 Overview 11
7.2 Reserved words 11
8 Data types 12
8.1 Overview 12
8.2 View data type 12
9 Declarations 12
9.1 Overview 12
9.2 Binding 13
9.2.1 Overview 13
9.2.2 Binding extent 13
9.2.3 Qualification of the binding extent 14
9.2.4 Identification of view and target instances 15
9.2.5 Equivalence classes and the instantiation process 16
9.2.6 Ordering of view and target instances 17
9.3 View declaration 18
9.3.1 Overview 18
9.3.2 View attributes 18
9.3.3 View partitions 19
9.3.4 Constant partitions 20
9.3.5 Dependent views 20
9.3.6 Specifying subtype views 21
9.3.7 Supertype constraints 22

9.4 Map declaration 23
9.4.1 Overview 23
9.4.2 Evaluation of the map body 24
9.4.3 Iteration under a single binding instance 24
9.4.4 Map partitions 27
9.4.5 Mapping to a type and its subtypes 28
9.4.6 Explicit declaration of complex entity data types 31
9.4.7 Dependent map 33
9.5 Schema view declaration 34
9.6 Schema map declaration 34
9.7 Local declaration 36
9.8 Constant declaration 37
9.9 Function declaration 37
9.10 Procedure declaration 37
9.11 Rule declaration 37
10 Expressions 37
10.1 Overview 37
10.2 View call 39
10.3 Map call 41
10.4 Partial binding calls 43
10.5 FOR expression 44
10.6 IF expression 47
10.7 CASE expression 47
10.8 Forward path operator 48
10.9 Backward path operator 49
11 Built-in functions 51
11.1 Extent - general function 51
12 Scope and visibility 51
12.1 Overview 51
12.2 Schema view 52
12.3 Schema map 53
12.4 View and dependent view 53
12.5 View partition label 53
12.6 View attribute identifier 53
12.7 FOR expression 54
12.8 Map and dependent map 54
12.9 FROM Language Element 54
12.10 Instantiation Loop 54
12.11 Path expression 55
13 Interface specification 55
13.1 Overview 55
13.2 The REFERENCE language element 55

Annex A (normative) Information object registration 57

Annex B (normative) EXPRESS-X language syntax 58
B.1 Tokens 58
B.2 Grammar rules 59
B.3 Cross reference listing 65

Annex C (normative) EXPRESS-X to EXPRESS transformation algorithm 69

Annex D (informative) Implementation considerations 71
D.1 Push mapping 71
D.2 Pull mapping 71
D.3 Support of constraint checking 71
D.4 Support for updates 71

Annex E (informative) Path operator unnest function 73

Annex F (informative) Mapping table semantics 74
F.1 Delimiter symbols 74
F.2 Aggregation symbols 76
F.3 Equal sign 77
F.4 Parentheses 77
F.5 Square brackets 78
F.6 Example 78
