## Calculation of load capacity of spur and helical gears - Part 3: Calculation of tooth bending strength

---

| <b>Contents</b>    |  | <b>Page</b> |
|--------------------|--|-------------|
| Foreword .....     |  | v           |
| Introduction ..... |  | vi          |
| 1                  | Scope .....  | 1           |
| 2                  | Normative references .....   | 1           |
| 3                  | Terms, definitions, symbols and abbreviated terms .....  | 1           |
| 4                  | Tooth breakage and safety factors .....  | 2           |
| 5                  | Basic formulae .....   | 2           |
| 5.1                | Safety factor for bending strength (safety against tooth breakage), SF .....                         | 2           |
| 5.2                | Tooth root stress, F .....   | 2           |
| 5.3                | Permissible bending stress, FP .....   | 4           |
| 6                  | Form factor, YF .....  | 8           |
| 6.1                | General .....  | 8           |
| 6.2                | Calculation of the form factor, YF: Method B .....   | 9           |
| 6.3                | Derivations of determinant normal tooth load for spur gears .....                                    | 13          |
| 7                  | Stress correction factor, YS .....   | 14          |
| 7.1                | Basic uses .....   | 14          |
| 7.2                | Stress correction factor, YS: Method B .....   | 14          |
| 7.3                | Stress correction factor for gears with notches in fillets .....                                     | 15          |
| 7.4                | Stress correction factor, YST, relevant to the dimensions of the standard reference test gears ..... | 15          |
| 8                  | Helix angle factor, Y .....  | 15          |
| 8.1                | Graphical value .....  | 16          |
| 8.2                | Determination by calculation .....   | 16          |
| 9                  | Rim thickness factor, YB .....   | 16          |
| 9.1                | Graphical values .....   | 16          |
| 9.2                | Determination by calculation .....   | 17          |
| 10                 | Deep tooth factor, YDT .....   | 18          |
| 10.1               | Graphical values .....   | 18          |
| 10.2               | Determination by calculation .....   | 18          |
| 11                 | Reference stress for bending .....   | 19          |
| 11.1               | Reference stress for Method A .....  | 19          |
| 11.2               | Reference stress, with values $F_{lim}$ and $F_E$ for Method B .....                                 | 19          |
| 12                 | Life factor, YNT .....   | 19          |
| 12.1               | Life factor, YNT: Method A .....   | 19          |
| 12.2               | Life factor, YNT: Method B .....   | 19          |
| 13                 | Sensitivity factor, YT, and relative notch sensitivity factor, $Y_{rel T}$ .....                     | 21          |
| 13.1               | Basic uses .....   | 21          |

|   |   |    |
|---|---|----|
| 13.2  | Determination of the sensitivity factors .....                        | 21 |
| 13.3  | Relative notch sensitivity factor, Y rel T: Method B .....            | 22 |
| 14  | Surface factors, YR, YRT, and relative surface factor, YR rel T ..... | 27 |
| 14.1  | Influence of surface condition .....                                  | 27 |
| 14.2  | Determination of surface factors and relative surface factors .....   | 28 |
| 14.3  | Relative surface factor, YR rel T: Method B .....                     | 28 |
| 15  | Size factor, YX .....   | 30 |
| 15.1  | Size factor, YX: Method A .....                                       | 30 |
| 15.2  | Size factor, YX: Method B .....                                       | 30 |
| Annex A (normative) Permissible bending stress, FP, obtained from notched, flat or plain polished test pieces ..... |   | 33 |
| Annex B (informative) Guide values for mean stress influence factor, YM .....                                       |   | 40 |
| Bibliography .....  |   | 42 |
